Corrective Action Compliance does not represent a full routine health inspection. Instead, it reflects that a facility has taken specific corrective actions in response to violations identified during an inspection. These actions may be taken during the inspection or afterward, and the Corrective Action Compliance allows for the facility's grade or status to be updated based on those corrections. Corrective actions may be demonstrated through documentation such as photos, videos, receipts, work orders, site visits, or both verifiable means showing that the violation has been addressed and compliance has been achieved.

APPROVED

An "Approved" grade indicates that a food establishment that has demonstrated compliance with the standards in the Food Code the Food Service and Retail Ordinance, other industry standards, and other laws and has received a Grade of Approved and is able to operate.

CONDITIONAL APPROVED

A "Conditional Approved" grade is issued when a facility is found to have violations of the Food Code, the Food Service and Ret Ordinance, industry standards, or applicable laws. While the facility may continue operating, it must complete specific corrective actions to address the violation A yellow sticker is placed alongside the green "Approved" sticker.

UNSATISFACTORY

An "Unsatisfactory" grade indicates that a facility has not met the required standards but is allowed to continue operating temporarily while corrective actions are completed. A red "Unsatisfactory" sticker will be displayed at the facility for the duration of this grade. This is a temporary status and requires timely follow-up to verify compliance.

CLOSED

A "Closed" grade is assigned when violations pose a significant risk to public health, requiring the facility to immediately cease operations. The facility must remain closed until corrective actions have been completed and verified. A facility with this grade will display an orange "Closed" sticker for the duration of the closure.

66 DINER - 1405 CENTRAL AVE NE - Approved

66 DINER - 1405 CENTRAL AVE NE

Food Establishment Class C

Date: 07/24/2026 - #: CAC-Food-070935-2026 - Inspection Result: Approved

Facility has sent CHPD documentation demonstrating corrective actions taken to address violations during the previous inspection on 7/22/26. Facility is being allowed to operate with a grade of Approved.

Violations corrected include:

Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

Facility sent multiple photos showing the ice machine had been drained, cleaned and sanitized.

Handwashing:

When to Wash and Cleaning Procedure

Facility sent signed standard operating procedures and indicated that they had their team demonstrate proper handwashing procedures.

Instructed PIC to continue focusing on handwashing training and coaching of team members to build habits and routines. Facility may receive inspection following up to ensure compliance.

66 DINER - 1405 CENTRAL AVE NE

Food Establishment Class C

Date: 07/22/2026 - #: RT-FOODEST-066536-2026 - Inspection Result: Conditional Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Ice machine Location: Prep kitchen area Condition of the Location: Significant caked on, on debris and black matter was wiped with alcohol swab off of the ice machine shield.

Violation: Hands Clean & Properly Washed

• When to Wash

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands.

Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

Observed food employee not wash hands when required.

Condition: Food handling employees not washing hands after scenarios such touching face, hair and body, changing gloves, and changing tasks

• Cleaning Procedure

- Food employees must clean their hands and exposed portions of their arms, for at least 20 seconds. Food employees shall use the following cleaning procedure in the order stated to clean their hands and exposed portions of their arms: (1) Rinse under clean, running warm water; (2) Apply an amount of cleaning compound recommended by the cleaning compound manufacturer; (3) Rub together vigorously for at least 10 to 15 seconds while: (a) Paying particular attention to removing soil from underneath the fingernails during the cleaning procedure, and (b) Creating friction on the surfaces of the hands and arms or surrogate prosthetic devices for hands and arms, finger tips, and areas between the fingers; (4) Thoroughly rinse under clean, running warm water; (5) Immediately follow the cleaning procedure with thorough drying Food handling employee re-washed and sanitized their hands.

Observed food employee washing hands incorrectly. Location: Back of house hand wash station

Manner: Improper hand wash procedures. Food employee failed to wet hands before applying hand cleanser

Violation: Physical Facilities, Construction and Repair

• Repairing-Premises, Structures, Attachments, and Fixtures-Methods

- Poor repair and maintenance compromise the functionality of the physical facilities. This requirement is intended to ensure that the physical facilities are properly maintained in order to serve their intended purpose. Instructed PIC to contact repair personnel to have area of concern repaired so that it is able to serve their intended purpose properly.

Observed the following areas of the facility in disrepair. Observed walls in disrepair by having numerous holes, gaps, cracks and crevices throughout the food service line, prep area/bakery area, 3 compartment sink, in back of milkshake counter and warewashing area.

A1 Wings and Seafood - 6904 Menaul BLCD Suite C - Approved

A1 Wings and Seafood - 6904 Menaul BLVD NE Suite

C Food Establishment Class C

Date: 07/21/2026 - #: CAC-Food-069024-2026 - Inspection Result: Approved

- Time/Temperature Control for Safety Food, Cold Holding
PIC provided video of cold holding unit able to cold hold at 41 °F.

A1 Wings and Seafood - 6904 Menaul BLVD NE Suite C

Food Establishment Class C

Date: 07/20/2026 - #: RT-FOODEST-068540-2026 - Inspection Result: Conditional Approved

Violation: Hot Holding & Reheating

• Time/Temperature Control for Safety Food, Hot Holding

- If food is held at improper temperatures for enough time, pathogens have the opportunity to multiply to dangerous numbers. Instructed PIC to rapidly reheat TCS foods to 165 F and to maintain temperature at 135 F and above.

Observed time/temperature control for safety food not hot held at 135°F or above. Food Item: Fried chicken wings
Food Temperature: 109 °F / 119 °F

The ability of equipment to hold hot foods at Code-required temperatures is critical to food safety. Improper holding and cooking temperatures continue to be major contributing factors to foodborne illness. Therefore, it is very important to have adequate equipment with enough capacity to meet the hot holding demands of the operation. Instructed PIC to make repairs necessary to have adequate hot holding equipment or must acquire sufficient equipment to do so.

Observed insufficient equipment to properly hold food hot. Location: Chicken wings being left in fryer basket Condition: Unable to properly hot hold food items at 135 °F.

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Cold Holding

• Time/Temperature Control for Safety Food, Cold Holding

- Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.

Observed food items in cold holding unit measuring above 41°F. Location: Main kitchen line Food Items and temperature: Raw meat 52 °F, raw shrimp 47 °F, sliced sausage 52 °F, Sliced carrots 48 °F, cut lettuce 55 °F, raw chicken 45 °F, raw hamburger patty 48 °F, raw meat 51 °F. PIC stated they remove food containers from cold holding unit and place back inside cold holding unit once prepped. The removal of pans along with no air conditioning available inside kitchen is causing the cold air to escape.

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported.

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: Activity of the Food: Stored and received

Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment.

Observed the food establishment does not have calibration logs for temperature measuring devices.

A1 Wings and Seafood - 6904 Menaul BLVD NE Suite C

Food Establishment Class C

Date: 07/20/2026 - #: RT-FOODEST-051820-2025 - Inspection Result: Unsatisfactory Re-Inspection required

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Manual and Mechanical Warewashing Equipment, Chemical Sanitization-Temperature, pH, Concentration and Hardness

- The effectiveness of chemical sanitizers can be directly affected various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions and shall be used within designated parameters. Instructed PIC that for chlorine sanitizer at a concentration range of 100ppm must also be at a minimum temperature of 55F.

Observed chlorine solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization. Location: Sanitizer bucket on main kitchen line tested at zero parts per million. Sanitizer bucket in back prep area tested above 200 parts per million.

Violation: Poisonous and Toxic/Chemical Substances

• Common Name-Working Containers

- When toxic or poisonous substances are purchased in bulk, it is common practice to divide the contents into working containers for use around the establishment.

When working containers are not labeled, a risk of misuses or food contamination is created. Working containers used for storing poisonous or toxic materials such as cleaners and sanitizers taken from bulk supplies shall be clearly and individually identified with the common name of the material. Instructed PIC that the unlabeled containers and their contents must not be used in the operation of the food establishment unless it can be shown that there is an internal system where the contents are known and the containers can be labeled properly.

Observed working containers used for storing poisonous or toxic materials taken from bulk supplies not properly labeled or identified. Container Type: Spray bottles Alleged Material: Degreaser and bleach

Violation: Hot Holding & Reheating

• Time/Temperature Control for Safety Food, Hot Holding

- If food is held at improper temperatures for enough time, pathogens have the opportunity to multiply to dangerous numbers. Instructed PIC to rapidly reheat TCS foods to 165 F and to maintain temperature at 135 F and above.

Observed time/temperature control for safety food not hot held at 135°F or above. Food Item: Fried chicken wings
Food Temperature: 109 °F / 119 °F

The ability of equipment to hold hot foods at Code-required temperatures is critical to food safety. Improper holding and cooking temperatures continue to be major contributing factors to foodborne illness. Therefore, it is very important to have adequate equipment with enough capacity to meet the hot holding demands of the operation. Instructed PIC to make repairs necessary to have adequate hot holding equipment or must acquire sufficient equipment to do so.

Observed insufficient equipment to properly hold food hot. Location: Chicken wings being left in fryer basket Condition: Unable to properly hot hold food items at 135 °F.

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: Sugar, flour, corn meal, spices Location: On shelving inside back prep area.

Violation: Cold Holding

• Time/Temperature Control for Safety Food, Cold Holding

- Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.

Observed food items in cold holding unit measuring above 41°F. Location: Main kitchen line Food Items and temperature: Raw meat 52 °F, raw shrimp 47 °F, sliced sausage 52 °F, Sliced carrots 48 °F, cut lettuce 55 °F, raw chicken 45 °F, raw hamburger patty 48 °F, raw meat 51 °F. PIC stated they remove food containers from cold holding unit and place back inside cold holding unit once prepped. The removal of pans along with no air conditioning available inside kitchen is causing the cold air to escape.

Violation: Storage

• Food Storage-Preventing Contamination from the Premises

- Unless food is stored on lot handling equipment or in water-proof containers, it must be stored at least six (6) inches above the floor. Storing food on the floor created opportunity for contamination and reduces the ease of cleanability in an area creating harborage for pests. Instructed PIC that food must be stored at least six (6) inches above the floor.

Observed food stored improperly less than six (6) inches off the floor. Location: Inside walk in refrigerator Food Item: Raw meats and sauces

Violation: Testing Devices

• Food Temperature Measuring Devices

- The presence and accessibility of food temperature measuring devices is critical to the effective monitoring of food temperatures. Proper use of such devices provides the operator or person in charge with important information with which to determine if temperatures should be adjusted or if foods should be discarded. Instructed PIC to provide and make readily accessible food temperature measuring devices.

Observed food temperature measuring devices were not provided or readily accessible.

Violation: Designated Areas

• Designation-Dressing Areas and Lockers

- Employees could introduce pathogens to food by hand-to-mouth-to-food contact areas. Instructed PIC to create a designated to accommodate employees' personal which food, food equipment and utensils, clean linens, and single-service and single-use articles must not be in jeopardy of contamination from these areas.

Observed facility did not provide a designated area for employees to eat, drink, or use tobacco products.

Violation: Physical Facilities, Cleaning

• **Drying Mops**

- Mops can contaminate food and food preparation areas if not properly cleaned and stored after use. Mops should be cleaned and dried in a sanitary manner away from food flow areas. Instructed person in charge to relocate mop to an area away from food and food preparation area and to ensure that mop is stored to promote air drying.

Observed a soiled mop not in use, stored directly inside mop sink.

Violation: Records

• **Temperature Logs**

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported.

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: Activity of the Food: Stored and received

Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment.

Observed the food establishment does not have calibration logs for temperature measuring devices.

ABC NOODLE HOUSE & SEAFOOD LLC - 8720 MENAUL BLVD NE - Approved

ABC NOODLE HOUSE & SEAFOOD LLC - 8720 MENAUL BLVD NE

Food Establishment Class C

Date: 07/24/2026 - #: PT0159401 - Inspection Result: Approved

Complaint

This inspection was the result of a complaint received by the Department and was unsubstantiated.

Violation: Training Records

• **Food Handler Cards**

- Food Employees shall demonstrate their knowledge of safe Food handling practices through passing a test from a Food Handler Training Program, Approved by the Enforcement Authority, and possess a Valid Food Handler Card within thirty (30) days of employment in a Food Establishment unless the Food Employee is a Certified Food Protection Manager; the Food Employee does not prepare or handle TCS Food, provided that at a minimum, the Permit Holder assures the Food Employee complies with Part 16 of these rules; or The Food Employee is working as a Food Employee or volunteer of a Temporary Food Establishment or Charitable Food Provider, provided that at minimum, the Person In Charge is a Certified Food Protection Manager or has a Valid Food Handler Card. Instructed PIC to ensure that all food employees are properly trained in safe food handling practices.

Observed that food employees were not in possession of a food handler card or had been trained in another approved food safety course.

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• **Food Storage Containers Identified with Common Name of Food**

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: Stainless steel food pans with salt and other spices Location: Prep cart

Violation: Surface Condition

• **Nonfood-Contact Surfaces, Smooth, Corrosion-Resistant, Non-Absorbent**

- Nonfood-contact surfaces of equipment routinely exposed to splash or food debris are required to be constructed of nonabsorbent materials to facilitate cleaning. Equipment that is easily cleaned minimizes the presence of pathogenic organisms, moisture, and debris and deters the attraction of rodents and insects. Instructed PIC to replace the surface with a material that is nonabsorbent.

Nonfood-contact surfaces of equipment routinely exposed to splash or food debris are required to be constructed of nonabsorbent materials to facilitate cleaning. Equipment that is easily cleaned minimizes the presence of pathogenic organisms, moisture, and debris and deters the attraction of rodents and insects. Instructed PIC to replace the surface with a material that is smooth. Dining room tables.

Observed nonfood contact surface that was absorbent. The surface was located in dining room and cashier area shelving. The surface was made out of synthetic wood and plywood The condition of the surface was absorbent.

Observed nonfood contact surface that was not smooth. The surface was located in dining room and cashier area shelving. The surface was made out of synthetic wood and plywood. The condition of the surface was unsealed and gaps.

Violation: Physical Facilities

• **Outer Openings, Protected**

- The presence of insects and rodents is minimized by protecting outer openings to the food establishment. Outer openings of a food establishment shall be

protected against the entry of insects and rodents by having solid, self-closing, tight-fitting doors. Instructed PIC to repair or replace the doors so that they are solid, self-closing, and tight-fitting. Light should not be seen through the door when closed. Self-closing doors are not required when they are exit doors that are solid and tight-fitting, designated as an emergency exit, or have limited use.

Observed doors to the outside that are not tight fitting, light can be seen at the edges.

Violation: Functionality and Accuracy

• Temperature Measuring Devices, Ambient Air and Water-Accuracy

- The placement of the temperature measuring device is important. If the device is placed in the coldest location in the storage unit, it may not be representative of the temperature of the unit. Food could be stored in areas of the unit that exceed temperature requirements for cold holding. Instructed PIC to move temperature measuring device to the warmest part of the cold holding unit to ensure that all areas of the storage unit are maintaining proper cold holding temperatures.

Observed in a mechanically refrigerated food storage unit the temperature measuring device was not placed in the warmest part of the unit. Equipment Location: Walk in freezer Thermometer Location: None available.

Violation: Hot & Cold-Water Availability & Pressure

• Water Capacity-Quantity and Availability

- Hot water required for washing items such as equipment and utensils and employees' hands, must be available in sufficient quantities to meet demand during peak water usage periods.

Observed facility with insufficient hot water. Location: Three compartment sink and automatic dish machine Manner: Hot water was unable to reach 110 °F.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris inside walk in freezer and to clean and sanitize all areas.

Observed buildup and debris inside walk in freezer. Ice frost buildup

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located in dining room The surface was made out of synthetic wood. The condition of the surface was sticky. Dining room tables

ALBUQUERQUE CHRISTIAN CHILDRENS HOME - 5700 WINTER HAVEN ST NW - Approved

ALBUQUERQUE CHRISTIAN CHILDRENS HOME - 5700 WINTER HAVEN ST NW

Food Establishment Class C

Date: 07/24/2026 - #: PT0157388 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- The effectiveness of chemical sanitizers can be directly affected various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions and shall be used within designated parameters. Instructed PIC that for sanitizer utilized it must be at the manufacturer specified concentration and temperature range with a contact time of 30 seconds.

Observed chemical sanitizer solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization.

Type of Sanitizer: none.

Location: kitchen.

Concentration:0 ppm.

Violation: Date Marking and Disposition

• Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition

- Ready-to-eat, time/temperature control for safety food prepared in a food establishment and held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24-hour period inside the facility. PIC voluntarily discarded food items bearing no date markings.

Observed ready-to-eat time and temperature controlled for safety food prepared and held within the establishment with no date marking indicators. Location: Refrigerator

. Food Items: Shredded cheeses, block cheese, beans, lettuce. Expiration Dates: no used by dates.

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding

food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: Bulk food containers.

Location: Storage food area.

ASHOKRA FARM - 205 SILVER AVE SW - Approved

ASHOKRA FARM - 205 SILVER AVE SW

Food Processor Class B

Date: 07/21/2026 - #: PT0157990 - Inspection Result: Approved

Violation: Warewashing Temperature and Concentration

• Sanitizers, Criteria-Chemicals

- Chemical sanitizers may be toxic if not used in accordance with requirements listed in the Code of Federal Regulations (CFR). Large concentrations of sanitizer in excess of the CFR requirements can be harmful because residues of the materials remain. Instructed PIC that sanitizer concentration levels must be within manufacturers guidelines and the CFR. PIC corrected violation by diluting sanitizer to 100 ppm.

Observed chemical sanitizer concentration exceeding the maximum level permitted. Type of Sanitizer: Chlorine

Location: Prep table shelf Concentration: Above 100 ppm

Ativo Albuquerque, LLC. - 4500 Quaker Heights PI NW PL - Approved

Ativo Albuquerque, LLC. - 4500 Quaker Heights PI NW PL

Food Establishment Class C

Date: 07/21/2026 - #: RT-FOODEST-079685-2025 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: meat Slicer, Ice machine Location: Equipment in the food prep area locations.

Condition of the Location: meat Slicer not in used with dry food debris on the blade and carriage.

Ice machine interior ceiling with a Black and tan soil residue, wiped with an alcohol pad and soil was removed.

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: 3 Unknown bulk food items.

Location: Back food prep area.

Violation: Testing Devices

• Food Temperature Measuring Devices

- The presence and accessibility of food temperature measuring devices is critical to the effective monitoring of food temperatures. Proper use of such devices provides the operator or person in charge with important information with which to determine if temperatures should be adjusted or if foods should be discarded. Instructed PIC to provide and make readily accessible food temperature measuring devices.

Observed food temperature measuring devices were not provided or readily accessible for the measuring of thin foods.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be

established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris.

Observed buildup and debris on the interior of the drains near the service and cooking area.

CANTEEN - 500 EUBANK BLVD SE

Retail Food Establishment Class 5

Date: 07/22/2026 - #: PT0156874 - Inspection Result: Approved

Violation: Designated Areas

- **Designated Areas-Employee Accommodations for eating/drinking/smoking**

- Employees could introduce pathogens to food by hand-to-mouth-to-food contact areas. Instructed PIC to teach and train staff on usage and proper storage of personal food items in designated employee coolers and on in the same coolers used to store retail products.

Observed personal employee drink being improperly stored inside a retail cooler used to display food products offered for sale.

Carniceria Cuauhtemoc - 9601 SAGE RD SW – Approved

Carniceria Cuauhtemoc - 9601 SAGE RD SW

Commissary Type 2

Date: 07/21/2026 - #: RT-FOODEST-068978-2026 - Inspection Result: Approved

Complaint

This inspection was the result of a complaint received by the Department and was unsubstantiated.

Violation: Training Records

- **Certified Food Protection Manager**

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Physical Facilities, Cleaning

- **Cleaning, Frequency and Restrictions**

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris and to clean and sanitize.

Observed buildup and debris on the floors throughout the facility.

CARNICERIA CUAUHEMOC - 9601 SAGE RD SW, A

Retail Food Establishment Class 4

Date: 07/21/2026 - #: PT0155790 - Inspection Result: Approved

Violation: Training Records

- **Certified Food Protection Manager**

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Plumbing

- **System Maintained in Good Repair**

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

Observed three compartment sink faucet is not maintained in good repair or is not repaired by law. Observed three compartment sink faucet found in disrepair by faucet leaking.

- **Backflow Prevention, Air Gap**

- During periods of extraordinary demand, drinking water systems may develop negative pressure in portions of the system. If a connection exists between the system and a source of contaminated water during times of negative pressure, contaminated water may be drawn into and foul the entire system. Standing water in sinks, dipper wells, steam kettles, and other equipment may become contaminated with cleaning chemicals or food residue. To prevent the introduction of this liquid into the water supply through back siphonage, various means may be used. The water outlet of a drinking water system must not be installed so that it contacts water in sinks, equipment, or other fixtures that use water. Providing an air gap between the water supply outlet and the flood level rim of a plumbing fixture or equipment prevents contamination that may be caused by backflow. Instructed PIC to contact repair personnel to have an air gap established to prevent backflow.

Observed an inadequate air gap at under sinks in back area and in meat market areas.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris and to clean and sanitize.

Observed buildup and debris on the floors in market area.

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces, Nonfood-Contact Surfaces, and Utensils - Grease/Soil Deposits, Cooking Equipment

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: meat market reach in coolers Location: Meat market Condition of the Location: debris buildup on the exterior and on the tracks of the coolers

CARNICERIA CUAUHEMOC - 9601 SAGE RD SW, A

Food Processor Class C

Date: 07/21/2026 - #: PT0155792 - Inspection Result: Approved

• Equipment, Food-Contact Surfaces, Nonfood-Contact Surfaces, and Utensils - Grease/Soil Deposits, Cooking Equipment

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: reach in coolers Location: processing area Condition of the Location: debris buildup in door tracks and inside reach in coolers

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris and to clean and sanitize.

Observed buildup and debris on the floors.

Violation: Consumer Advisories

• Compliance with Food Law, Labeling

- Food labels serve as a primary means by which consumers can make informed decisions about their food selections and answer questions including ingredients, allergens, weight, and manufacturer. Food must be labeled as specified by 21 CFR 101 - Food labeling, and 9 CFR 317 Labeling, marking devices, and containers. This must include: (1) The common name of the food, or absent a common name, an adequately descriptive identity statement; (2) If made from two or more ingredients, a list of ingredients and sub ingredients in descending order of predominance by weight, including a declaration of artificial colors, artificial flavors and chemical preservatives, if contained in the food; (3) An accurate declaration of the net quantity of contents; (4) The name and place of business of the manufacturer, packer, or distributor; and (5) The name of the food source for each major food allergen contained in the food unless the food source is already part of the common or usual name of the respective ingredient. (6) Nutrition labeling as specified in 21 CFR 101 - Food Labeling and 9 CFR 317 Subpart B Nutrition Labeling, if required by law. (7) For any salmonid fish containing canthaxanthin or astaxanthin as a color additive, the labeling of the bulk fish container, including a list of ingredients, displayed on the retail container or by other written means, such as a counter card, that discloses the use of canthaxanthin or astaxanthin Instructed PIC to correct mislabeled food product prior to continuing to offer for sale.

Observed foods packaged inside the facility without necessary labeling. Location: Processing food area Food Items: Salsa, Pico De Gallo Manner: no labels on containers had pic pull containers and put labels on

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items. Equipment, salsa, pico de gallo Activity of the Food: Cold holding

• **Calibration Logs**

- Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment
Observed the food establishment does not have calibration logs for temperature measuring devices.

CARNICERIA CUAUHEMOC - 9601 SAGE RD SW, A

Retail Food Establishment Class 4

Date: 07/21/2026 - #: PT0155793 - Inspection Result: Approved

Violation: Physical Facilities, Construction and Repair

• **Repairing-Premises, Structures, Attachments, and Fixtures-Methods**

- Poor repair and maintenance compromise the functionality of the physical facilities. This requirement is intended to ensure that the physical facilities are properly maintained in order to serve their intended purpose. Instructed PIC to contact repair personnel to have area of concern repaired so that it is able to serve their intended purpose properly.

Observed the following areas of the facility in disrepair. Observed Grocery area in disrepair by holes and missing ceiling tiles in grocery area

Violation: Physical Facilities, Cleaning

• **Cleaning, Frequency and Restrictions**

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris and to clean and sanitize.

Observed buildup and debris on the floors throughout the grocery area.

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch**

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: the interior of walk-in coolers and reach in coolers Location: grocery area Condition of the Location: debris buildup on shelves inside walk in and reach in coolers

CARNICERIA CUAUHEMOC - 9601 SAGE RD SW, A

Food Establishment Class C

Date: 07/21/2026 - #: PT0158030 - Inspection Result: Approved

Violation: Training Records

• **Certified Food Protection Manager**

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Physical Facilities, Cleaning

• **Cleaning, Frequency and Restrictions**

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris to clean and sanitize.

Observed buildup and debris on the floors.

Violation: Records

• **Temperature Logs**

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

9-6-1m General

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: rice, steak fajitas, beans, carne adovada, diced onions, Salsa, Pico de Gallo Activity of the Food: Cold Holding, Hot Holding, Equipment, Cooling

• **Calibration Logs**

- Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment

Observed the food establishment does not have calibration logs for temperature measuring devices.

CHI-CO INC - 1751 JUAN TABO BLVD NE - Approved

CHI-CO INC - 1751 JUAN TABO BLVD NE

Food Establishment Class C

Date: 07/20/2026 - #: RT-FOODEST-014034-2025 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch**

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Ice Machine Location: Back of kitchen by three compartment sink Condition of the Location: Brown and yellow organic substance on inside of ice machine bin

Violation: Cold Holding

• **Time/Temperature Control for Safety Food, Cold Holding**

- Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.

Observed food items in cold holding unit measuring above 41°F. Location: West side Prep top cooler on main cool line Food Items: Steak 47°F, Sliced Pastrami 46°F, Sliced Turkey 46°F, Sliced Onions 48°F, Shredded Lettuce 46°F. Cooked Meat 46°F, Sauerkraut 50°F, Sliced Cheese 50°F,

Violation: Storage

• **Equipment and Utensils, Air-Drying Required**

- Items must be allowed to drain and to air-dry before being stacked or stored. Stacking wet items such as pans prevents them from drying and may allow an environment where microorganisms can begin to grow. Instructed PIC to allow items to be air-dried, and to retrain staff on preventing wet stacking.

Observed equipment was not air dried and was wet stacked. Location: Ware washing area Equipment Type: Food service pans Manner: Not air dried and stacked wet

Churro Please LLC - 520 Louisiana BLVD NW - Approved

Churro Please LLC - 520 Louisiana BLVD NW

Mobile Food Unit Class C

Date: 07/24/2026 - #: RT-MBFOOD-029475-2025 - Inspection Result: Approved

Violation: Surface Not Clean

• **Nonfood Contact Surfaces - Cleaning Frequency**

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located on deep fryer exteriors. The surface was made out of stainless steel. The condition of the surface was soiled in grease buildup.

CLUB DEMONSTRATION SERVICES - 500 EUBANK BLVD SE - Approved

CLUB DEMONSTRATION SERVICES - 500 EUBANK BLVD SE

Retail Food Establishment Class 5

Complaint

This inspection was the result of a complaint received by the Department and was unsubstantiated.

Violation: Installation

• **Handwashing Sinks, Installation, Water 85F**

- A handwashing sink shall be equipped to provide water at a temperature of at least 85°F through a mixing valve or combination faucet. Instructed PIC to repair or replace handwashing sink so it has hot water available at all times.

Observed handwashing sink with hot water not available. Location: Club demonstration service prep area Condition: Handwash station was only able to reach 81°F

COSTCO WHOLESALE CORPORATION - 500 EUBANK BLVD SE
Food Establishment Class C
Date: 07/22/2026 - #: RT-FOODEST-033078-2025 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Squeeze bottles, pizza cutter, scoops and other serving utensils.
 Location: Kitchen clean dish storage rack
 Condition of the Location: Soiled with debris buildup and food residue

Violation: Plumbing

• System Maintained in Good Repair

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

Observed water filter is not maintained in good repair or is not repaired by law. Observed water filter in soda bib closet to be found in disrepair by having a continuous leak that needs to be repaired.

• Backflow Prevention, Air Gap

- During periods of extraordinary demand, drinking water systems may develop negative pressure in portions of the system. If a connection exists between the system and a source of contaminated water during times of negative pressure, contaminated water may be drawn into and foul the entire system. Standing water in sinks, dipper wells, steam kettles, and other equipment may become contaminated with cleaning chemicals or food residue. To prevent the introduction of this liquid into the water supply through back siphonage, various means may be used. The water outlet of a drinking water system must not be installed so that it contacts water in sinks, equipment, or other fixtures that use water. Providing an air gap between the water supply outlet and the flood level rim of a plumbing fixture or equipment prevents contamination that may be caused by backflow. Instructed PIC to contact repair personnel to have an air gap established to prevent backflow.

Observed an inadequate air gap at floor drain in utility closet storing soda bibs. Observed soda machine drain lines to be positioned directly below the flood rim of the floor drain lacking a 2-inch air gap.

Violation: Personal Cleanliness

• Prohibition-Jewelry

- Items of jewelry such as rings, bracelets, and watches may collect soil and the construction of the jewelry may hinder routine cleaning. As a result, the jewelry may act as a reservoir of pathogenic organisms transmissible through food. An additional hazard associated with jewelry is the possibility that pieces of the item or the whole item itself may fall into the food being prepared. Hard foreign objects in food may cause medical problems for consumers, such as chipped and/or broken teeth and internal cuts and lesions. Except for a plain ring such as a wedding band, while preparing food, food employees may not wear jewelry including medical information jewelry on their arms and hands. Instructed PIC to retrain employees on personal cleanliness requirements.

Observed employee wearing unapproved jewelry while preparing food. Food Preparation Activity: Actively working with open food Jewelry Observed: Bracelet (wrist jewelry)

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris.

Observed water buildup on the floor under dish washing machine and soda bib storage racks.

COSTCO WHOLESALE CORPORATION - 500 EUBANK BLVD SE
Retail Food Establishment Class 4
Date: 07/22/2026 - #: PT0046102 - Inspection Result: Approved

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris.

Observed buildup and debris on the floors in grocery sales floor area under and in between pellets displaying retail food. Observed significant debris buildup and

food residue that needs to be cleaned and sanitized.

COSTCO WHOLESALE CORPORATION - 500 EUBANK BLVD SE

Retail Food Establishment Class 5

Date: 07/22/2026 - #: PT0046103 - Inspection Result: Approved

Violation: Storage

• In-Use Utensils, Between-Use Storage

- During pauses in food preparation or dispensing, food preparation and dispensing utensils shall be stored: (A) In the food with their handles above the top of the food and the container; (B) In food that is not time/temperature control for safety food with their handles above the top of the food within containers or equipment that can be closed, such as bins of sugar, flour, or cinnamon; (C) On a clean portion of the food preparation table or cooking equipment only if the in-use utensil and the food-contact surface of the food preparation table or cooking equipment are cleaned and sanitized at a frequency specified under 4-602.11 and 4-702.11; (D) In running water of sufficient velocity to flush particulates to the drain, if used with moist food such as ice cream or mashed potatoes; (E) In a clean, protected location if the utensils, such as ice scoops, are used only with a food that is not time/temperature control for safety food; or (F) In a container of water if the water is maintained at a temperature of at least 57oC (135oF) and the container is cleaned at a frequency specified under Subparagraph 4-602.11(D)(7). Educated and informed PIC on how to properly store utensils.

Observed utensils during a pause in use stored incorrectly. Utensil was stored in food with their handle not above the top of the food and the container. Utensil Type: Metal Food scoop Location Dry good bins Condition of the Location: Handle of scoop covered in dry good food product

Violation: Plumbing

• Backflow Prevention, Air Gap

- During periods of extraordinary demand, drinking water systems may develop negative pressure in portions of the system. If a connection exists between the system and a source of contaminated water during times of negative pressure, contaminated water may be drawn into and foul the entire system. Standing water in sinks, dipper wells, steam kettles, and other equipment may become contaminated with cleaning chemicals or food residue. To prevent the introduction of this liquid into the water supply through back siphonage, various means may be used. The water outlet of a drinking water system must not be installed so that it contacts water in sinks, equipment, or other fixtures that use water. Providing an air gap between the water supply outlet and the flood level rim of a plumbing fixture or equipment prevents contamination that may be caused by backflow. Instructed PIC to contact repair personnel to have an air gap established to prevent backflow.

Observed an inadequate air gap at floor drain next to three compartment sink

Violation: Pest Control

• Insect Control Devices, Design and Installation

- Exposed food and food-contact surfaces must be protected from contamination by insects or insect parts. Installation of the device over food preparation areas or in close proximity to exposed food and/or food-contact surfaces could allow dead insects and/or insect parts to be impelled by the electric charge, fall, or be blown from the device onto food or food-contact surfaces. Instructed PIC to ensure that insect control devices do not cause more contamination than they prevent by placing them away from food and the equipment and utensils used for food and ensuring that they are constructed in a way that contains insects and their parts.

Observed an insect control device installed in a way that does not prevent insects or insect fragments from contaminating food or clean equipment, utensils, linens, or single-service and single-use articles. Location: North side of Bakery area Type of Device: electrocution Contamination: Installed over clean food service pans

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed utensil food-contact surface with the buildup of soil residues. Utensil Type: Mixing bowl attachments Location: Hanging on clean utensils rack next to three compartment sink Condition of the Location: Food debris buildup

Violation: Designated Areas

• Designated Areas-Employee Accommodations for eating/drinking/smoking

- Employees could introduce pathogens to food by hand-to-mouth-to-food contact areas. Instructed PIC to create a designated to accommodate employees' personal which food, food equipment and utensils, clean linens, and single-service and single-use articles must not be in jeopardy of contamination from these areas.

Observed facility did not provide a designated area for employees to eat, drink, or use tobacco products.

Violation: Use Limitations

• Wiping Cloths, Use Limitation

- Wiping cloths should be stored in a sanitizer solution to prevent pathogens from transferring to food. Change the sanitizer solution as needed to maintain proper concentration and avoid over-accumulation of organic material. Regular chemical test kits can ensure proper sanitizer concentration. While wiping down surfaces with reusable wet cloths is acceptable, it doesn't meet the requirements for cleaning and sanitizing food contact surfaces. Dry cloths and disposable towels are acceptable for situations where full cleaning isn't needed. To effectively clean and sanitize food contact surfaces, remove organic material with detergents or cleaners, then apply a sanitizing solution of appropriate temperature and chemical concentration. The solution should stay on the surface for a specific contact

time and follow the manufacturer's EPA-registered label. Instructed PIC to retrain employees on wiping cloths use requirements and restrictions and to discontinue misuse of wiping cloths.

Observed wiping cloths improperly used. Observed soiled wiping cloths stored on prep table

COSTCO WHOLESALE CORPORATION - 500 EUBANK BLVD SE

Retail Food Establishment Class 4

Date: 07/22/2026 - #: PT0046104 - Inspection Result: Approved

Violation: Plumbing

• System Maintained in Good Repair, Repaired According to Law

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

Observed Drain piping for three compartment sink is not maintained in good repair or is not repaired by law. Observed Drain pipes found in disrepair by leaking grey water directly onto the floor

COSTCO WHOLESALE CORPORATION - 500 EUBANK BLVD SE

Retail Food Establishment Class 5

Date: 07/22/2026 - #: RT-RET-033077-2025 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Manual and Mechanical Warewashing Equipment, Chemical Sanitization-Temperature, pH, Concentration and Hardness

- The effectiveness of chemical sanitizers can be directly affected various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions, and shall be used within designated parameters. Instructed PIC that for quaternary ammonium compound solution at a concentration range of allowed by the manufacturer must also be at a minimum temperature of 75F with a contact time of 30 seconds. PIC corrected violation by remaking sanitizer solution

Observed quaternary ammonium compound solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization. Location: Wiping cloth bucket and three compartment sink Concentration 100ppm and 0ppm

CR GOLF - 9717 COPPER NE - Approved

CR GOLF - 9717 COPPER NE

Food Establishment Class C

Date: 07/24/2026 - #: RT-FOODEST-070644-2026 - Inspection Result: Approved

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

• Food Handler Cards

- Food Employees shall demonstrate their knowledge of safe Food handling practices through passing a test from a Food Handler Training Program, Approved by the Enforcement Authority, and possess a Valid Food Handler Card within thirty (30) days of employment in a Food Establishment unless the Food Employee is a Certified Food Protection Manager; the Food Employee does not prepare or handle TCS Food, provided that at a minimum, the Permit Holder assures the Food Employee complies with Part 16 of these rules; or The Food Employee is working as a Food Employee or volunteer of a Temporary Food Establishment or Charitable Food Provider, provided that at minimum, the Person In Charge is a Certified Food Protection Manager or has a Valid Food Handler Card. Instructed PIC to ensure that all food employees are properly trained in safe food handling practices.

Observed that food employees were not in possession of a food handler card or had been trained in another approved food safety course.

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: Salt, sugar etc. Location: Dry storage area

Violation: Personal Cleanliness

• Effectiveness-Hair Restraints

- Hair can be both a direct and indirect vehicle of contamination. Food employees may contaminate their hands when they touch their hair. A hair restraint keeps dislodged hair from ending up in the food and may deter employees from touching their hair. Food employees must wear hair restraints such as hats, hair coverings or nets, beard restraints, and clothing that covers body hair, that are designed and worn to effectively keep their hair from contacting exposed food; clean equipment, utensils, and linens; and unwrapped single-service and single-use articles. Instructed PIC to retrain food employees on proper hair restraints.

Observed a food employee without proper hair restraints. Location: Inside kitchen Activity: Preparing food entrees

• **Eating, Drinking, or Using Tobacco Products**

- Eating by employees in food preparation areas is prohibited because of the potential that the hands, food, and food-contact surfaces may become contaminated. Instructed PIC to retrain employees on designated eating areas.

Observed employee eating in an undesignated area. Proper hygienic practices must be followed by food employees in performing assigned duties to ensure the safety of the food, prevent the introduction of foreign objects into the food, and minimize the possibility of transmitting disease through food. Location: Inside kitchen Activity: Employee eating inside kitchen, employee food stored above facility food inside walk in cooler, employee food stored above single use items such as sugars and sweeteners.

A food employee may drink from a closed beverage container if the container is handled to prevent the contamination of the employee's hands, the container, and exposed food, clean equipment, utensils, linens, and unwrapped single-service and single-use articles. Instructed PIC that employee drinks should be kept in a designated area and should be in a cup with a lid and straw.

Observed a food employee with an improper drink. Location: Stored in multiple places throughout facility.

Type of Drink: Twist top water bottles, coffee cups, refillable employee beverage containers

Violation: Hands Clean & Properly Washed

• **When to Wash**

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands.

Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

Observed food employee does not wash hands when required. Condition: Employee was eating inside kitchen then continued to work without washing hands.

Violation: Physical Facilities, Cleaning

• **Cleaning, Frequency and Restrictions**

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on kitchen walls stainless steel walls underneath shelving and prep tables and to clean and sanitize all areas.

Observed buildup and debris on kitchen walls stainless steel walls underneath shelving and prep tables.

CR GOLF - 9717 COPPER NE

Food Establishment Class C

Date: 07/24/2026 - #: PT0156109 - Inspection Result: Closure Re-Inspection Required

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch**

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Slicer, spatula, dicer, Ice machine Location: Inside main kitchen stored away Condition of the Location: Debris buildup.

Violation: Thawing

• **Thawing Method**

- Freezing prevents microbial growth in foods, but usually does not destroy all microorganisms. Improper thawing provides an opportunity for surviving bacteria to grow to harmful numbers and/or produce toxins. Food must be thawed in an approved method such as: A. under refrigeration maintaining food below forty-one (41) °F or below, B. submerged under running water at seventy (70) °F, or below with sufficient velocity to agitate and float off loose particles in the overflow, if ready-to-eat does not go above forty-one (41) °F, or if raw does not exceed forty-one (41) °F for four (4) hours including the cooking or re-cooling process C. in a microwave oven only when the food will be immediately transferred to conventional cooking facilities as part of a continuous cooking process, or when the entire, uninterrupted cooking process takes place in the microwave oven D. as part of the cooking process E. prepared for immediate service in response to an individual consumer's order Instructed PIC to retrain food employees on thawing food and PIC corrected violation by placing inside walk in refrigerator.

Observed frozen time/temperature control for safety food improperly thawing. Food: Chopped green chile Location: Thawing in prep sink standing water Condition: Still slightly frozen Method: Thawing in standing water at room temperature.

Violation: Pest Control

• **Removing Dead or Trapped Birds, Insects, Rodents and other Pest**

- Dead or trapped birds, insects, rodents, and other pests shall be removed from control devices and the premises at a frequency that prevents their accumulation, decomposition, or the attraction of pests. Instructed PIC that traps must be checked regularly and pests removed when possible or traps replaced when removal

is not feasible for the trap type. Instructed PIC to remove dead roaches clean and sanitize area.

Observed dead cockroaches on floor inside storage room Location: Storage room next to employee restroom
Pest Type: cockroach Pest Condition: dead

Violation: Use Limitations

• Wiping Cloths, Use Limitation

- Wiping cloths should be stored in a sanitizer solution to prevent pathogens from transferring to food. Change the sanitizer solution as needed to maintain proper concentration and avoid over-accumulation of organic material. Regular chemical test kits can ensure proper sanitizer concentration. While wiping down surfaces with reusable wet cloths is acceptable, it doesn't meet the requirements for cleaning and sanitizing food contact surfaces. Dry cloths and disposable towels are acceptable for situations where full cleaning isn't needed. To effectively clean and sanitize food contact surfaces, remove organic material with detergents or cleaners, then apply a sanitizing solution of appropriate temperature and chemical concentration. The solution should stay on the surface for a specific contact time and follow the manufacturer's EPA-registered label. Instructed PIC to retrain employees on wiping cloths use requirements and restrictions and to discontinue misuse of wiping cloths.

Observed wiping cloths improperly used. Observed wiping cloths used for cleaning and sanitizing.

Violation: Date Marking and Disposition

• Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition

- Ready-to-eat, time/temperature control for safety food prepared in a food establishment and held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24-hour period inside the facility. PIC voluntarily discarded food items bearing no date markings.

Observed ready-to-eat time and temperature controlled for safety food prepared and held within the establishment with no date marking indicators. Location: Walk in refrigerator Food Items: Prepared vegetables, cooked meats Expiration Dates: Some items date marked some are not date marked.

Violation: Knowledgeable

• Knowledgeable Person In Charge

- A designated person in charge that is knowledgeable about foodborne disease prevention, the Food Code, and local ordinance requirements is prepared to recognize conditions that may contribute to foodborne illness or that otherwise fail to comply with food safety regulations and is authorized to take appropriate preventive and corrective actions. The person in charge may demonstrate knowledge by having no priority violations, being a certified food protection manager, responding correctly to an inspector's questions as they relate to specific food operations. Instructed PIC that additional food safety training is required in the areas that deficiency was shown.

Observed that the person in charge was unable to demonstrate knowledge of foodborne disease prevention and other requirements of the Food Code and local ordinances. Knowledge Tested: PIC was asked about food temperature cold holding stated 43 °F, hot holding stated 160 °F, PIC only knew one foodborne illness Salmonella. PIC did not know the proper levels of sanitation for chlorine sanitizer and was unaware of cooling procedures and documentation.

Violation: Cooling

• Cooling Methods

- Facility voluntarily discarded the improperly cooled food items.

Facility voluntarily discarded the improperly cooled food items. Advised facility to actively monitor cooling product in order to make corrections as needed to properly cool product and to utilize one or more methods such as 1) Place the food in a shallow pan 2) Separate the food into smaller or thinner portions 3) Use rapid cooling equipment 4) Stir the food in a container placed in an ice/water bath 5) Use containers that facilitate heat transfer 6) Only partially cover product, if protected from overhead contamination.

Violation: Training Records

• Food Handler Cards

- Food Employees shall demonstrate their knowledge of safe Food handling practices through passing a test from a Food Handler Training Program, Approved by the Enforcement Authority, and possess a Valid Food Handler Card within thirty (30) days of employment in a Food Establishment unless the Food Employee is a Certified Food Protection Manager; the Food Employee does not prepare or handle TCS Food, provided that at a minimum, the Permit Holder assures the Food Employee complies with Part 16 of these rules; or The Food Employee is working as a Food Employee or volunteer of a Temporary Food Establishment or Charitable Food Provider, provided that at minimum, the Person In Charge is a Certified Food Protection Manager or has a Valid Food Handler Card. Instructed PIC to ensure that all food employees are properly trained in safe food handling practices.

Observed that food employees were not in possession of a food handler card or had been trained in another approved food safety course.

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

• Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: Salt, sugar etc. Location: Dry storage area

Violation: Maintenance

• Maintaining Premises, Unnecessary Items and Litter

- The presence of unnecessary articles, including equipment, which is no longer used, makes regular and effective cleaning more difficult and less likely. It can also provide harborage for insects and rodents. Areas designated as equipment storage areas and closets must be maintained in a neat, clean, and sanitary manner. They must be routinely cleaned to avoid attractive or harborage conditions for rodents and insects. Instructed the PIC to keep the premises clean of unused articles and litter.

Observed items on the premises of the food establishment that is no longer used or is non-functional. Location: Catering storage room and hallway leading to banquet room Items list: Egg cartons boxes, markers, towels, sunscreen, Christmas decor, totes, miscellaneous items Condition of the items: Dis organized, cluttered

Violation: Designated Areas

• Designated Areas-Employee Accommodations for eating/drinking/smoking

- Employees could introduce pathogens to food by hand-to-mouth-to-food contact areas. Instructed PIC to create a designated to accommodate employees' personal which food, food equipment and utensils, clean linens, and single-service and single-use articles must not be in jeopardy of contamination from these areas.

Observed facility did not provide a designated area for employees to eat, drink, or use tobacco products.

• Designation-Dressing Areas and Lockers

- Personal belongings can contaminate food, food equipment, and food-contact surfaces. Proper storage facilities are required for articles such as purses, coats, shoes, and personal medications. Instructed PIC to create an area designated for personal belongings in which food, food equipment and utensils, clean linens, and single-service and single-use articles are not be in jeopardy of contamination from these areas.

Observed facility did not provide lockers or other suitable facilities for storage of employees clothing or other personal belongings.

Violation: Personal Cleanliness

• Effectiveness-Hair Restraints

- Hair can be both a direct and indirect vehicle of contamination. Food employees may contaminate their hands when they touch their hair. A hair restraint keeps dislodged hair from ending up in the food and may deter employees from touching their hair. Food employees must wear hair restraints such as hats, hair coverings or nets, beard restraints, and clothing that covers body hair, that are designed and worn to effectively keep their hair from contacting exposed food, clean equipment, utensils, and linens; and unwrapped single-service and single-use articles. Instructed PIC to retrain food employees on proper hair restraints.

Observed a food employee without proper hair restraints. Location: Inside kitchen Activity: Preparing food entrees

• Eating, Drinking, or Using Tobacco Products

- Eating by employees in food preparation areas is prohibited because of the potential that the hands, food, and food-contact surfaces may become contaminated. Instructed PIC to retrain employees on designated eating areas.

Observed employee eating in an undesignated area. Proper hygienic practices must be followed by food employees in performing assigned duties to ensure the safety of the food, prevent the introduction of foreign objects into the food, and minimize the possibility of transmitting disease through food. Location: Inside kitchen Activity: Employee eating inside kitchen, employee food stored above facility food inside walk in cooler, employee food stored above single use items such as condiments.

A food employee may drink from a closed beverage container if the container is handled to prevent the contamination of the employee's hands, the container, and exposed food, clean equipment, utensils, linens, and unwrapped single-service and single-use articles. Instructed PIC that employee drinks should be kept in a designated area and should be in a cup with a lid and straw.

Observed a food employee with an improper drink. Location: Stored in multiple places throughout facility.

Type of Drink: Twist top water bottles, coffee cups, refillable employee beverage containers

Violation: Hands Clean & Properly Washed

• When to Wash

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands. Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

Observed food employee does not wash hands when required. Condition: Employee was eating inside kitchen then continued to work without washing hands.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on kitchen walls stainless steel walls underneath shelving and prep tables and to clean and sanitize all areas.

Observed buildup and debris on kitchen walls stainless steel walls underneath shelving and prep tables.

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located Inside kitchen The surface was made out of synthetic wood The condition of the surface was debris buildup. Kitchen drawers and cabinets with debris buildup storing utensils and kitchen utensils.

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported.

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: Green and red chile, raw meats, prepared vegetables, cooked meats and dairy products. Activity of the Food: Stored, cooled, received

Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment.

Observed the food establishment does not have calibration logs for temperature measuring devices.

CST Services, LLC DBA: Circle K #2741243 - 141 98TH ST NW - Approved

CST Services, LLC DBA: Circle K #2741243 - 141 98TH ST NW
Retail Food Establishment Class 3
Date: 07/22/2026 - #: PT0134599 - Inspection Result: Approved

Violation: Physical Facilities, Construction and Repair

• Repairing-Premises, Structures, Attachments, and Fixtures-Methods

- Poor repair and maintenance compromise the functionality of the physical facilities. This requirement is intended to ensure that the physical facilities are properly maintained in order to serve their intended purpose. Instructed PIC to contact repair personnel to have area of concern repaired so that it is able to serve their intended purpose properly.

Observed the following areas of the facility in disrepair. Observed Kitchen area behind oven in disrepair by electrical plug missing electrical cover

Violation: Plumbing

• System Maintained in Good Repair, Repaired According to Law

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

Observed system is not maintained in good repair or is not repaired by law. Observed handwashing sink faucet cold and hot water knobs leaking.

• System Maintained in Good Repair

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

Observed drain below hand washing sink is not maintained in good repair or is not repaired by law. Observed drain found in disrepair by having debris inside drain.

Violation: Maintenance and Operation

• Good Repair and Proper Adjustment-Equipment

- Proper maintenance of equipment to manufacturer specifications helps ensure that it will continue to operate as designed. Failure to properly maintain equipment could lead to violations that place the health of the consumer at risk. Equipment and its components shall be maintained in a state of repair Instructed PIC to repair or replace equipment or components.

Observed equipment not maintained in good repair. Location: walk in freezer kitchen area Type of Equipment: Walk in Freezer Condition of the equipment: paint chipping from roof in walk in freezer

Violation: Poisonous and Toxic/Chemical Substances

• Poisonous or Toxic Material Containers

-Poisonous or toxic materials shall be stored and displayed for retail so they cannot contaminate food, equipment, utensils, linens, and single-service and single-use articles by separating the poisonous or toxic materials by spacing or partitioning and locating the poisonous or toxic materials in an area that is not above food, equipment, utensils, linens, and single-service and single-use articles. Instructed PIC to move toxic chemicals to an approved location and that contaminated single-service and single-use articles must be discarded.

Observed poisonous or toxic materials stored in a manner that has the potential to contaminate food. Poisonous/Toxic Substance: paint and chemicals Location: in cabinet below countertop where food and single service items are located.

Curry Leaf - 6910 MONTGOMERY BLVD NE, C - Unsatisfactory Re-Inspection required

Curry Leaf - 6910 MONTGOMERY BLVD NE, C

Food Establishment Class C

Date: 07/22/2026 - #: CAC-Food-070400-2026 - Inspection Result: Unsatisfactory Re-Inspection required

Facility was opened under an unsatisfactory due to corrective actions provided.

- Two cold Holding unit on main line are now able to cold hold at 41 °F. Still have one prep table that was unable to properly cold hold. Food was discarded.
- Manual and Mechanical Warewashing Equipment, Chemical Sanitization-Temperature, pH, Concentration, and Hardness PIC made repairs to dish machine tested at 100 parts per million
- Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition PIC discarded all food items that were not date marked.
- PIC removed chemicals from kitchen areas on top of prep tables and in dish ware storage area placed in designated area.
- Using a Handwashing Sink-Operation and Maintenance Handwashing Cleanser, Availability Hand Drying Provisions PIC added soap and paper towels. Also, repaired leak underneath hand washing sink.
- Valid Permit PIC paid permit provided receipt.
- Certified Food Protection Manager PIC provided Manager Food Safety Certification
- Food Handler Cards PIC provided food handler cards

Curry Leaf - 6910 MONTGOMERY BLVD NE, C

Food Establishment Class C

Date: 07/20/2026 - #: RT-FOODEST-001686-2026 - Inspection Result: Closure Re-Inspection Required

Complaint

This inspection was the result of a complaint received by the Department and was substantiated.

Violation: Preparation

• Food Preparation

- Food preparation activities may expose food to an environment that may lead to the food's contamination. Just as food must be protected during storage, it must also be protected during preparation. Instructed PIC that the contaminated food must not be used in the operations of the food establishment and to ensure food is protected from contamination at all stages of preparation.

Observed unpackaged food unprotected from environmental contamination during preparation. Location: Back of facility Food Item: Raw chicken Condition: Observed employee preparing raw chicken while sitting on five-gallon bucket with grey bus tub on the floor cutting board stored on top of raw chicken bus tub.

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Manual and Mechanical Warewashing Equipment, Chemical Sanitization-Temperature, pH, Concentration and Hardness

- The effectiveness of chemical sanitizers can be directly affected various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions, and shall be used within designated parameters. Instructed PIC that for chlorine sanitizer at a concentration range of 100ppm must also be at a minimum temperature of 55F.

Observed chlorine solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization. Location: Automatic dish machine Concentration: 10 parts per million

Chemical sanitizers may be toxic if not used in accordance with requirements listed in the Code of Federal Regulations (CFR). Large concentrations of sanitizer in excess of the CFR requirements can be harmful because residues of the materials remain. Instructed PIC that sanitizer concentration levels must be within manufacturers guidelines and the CFR.

Observed chemical sanitizer concentration exceeding the maximum level permitted. Type of Sanitizer: chlorine sanitizer Location: Red sanitizer buckets Concentration: Above 200 parts per million. Also, sanitizer buckets were stored directly on the kitchen floor.

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed utensil food-contact surface with the buildup of soil residues. Utensil Type: Knives Location: On shelving on main kitchen line next to stove top Condition of the Location: Stored away with debris buildup.

Violation: Poisonous and Toxic/Chemical Substances

• Separation-Storage

- The storage of poisonous or toxic materials directly above or adjacent to food could result in contamination of the food from spillage. Poisonous or toxic materials must be stored so they cannot contaminate food, equipment, utensils, linens, and single-service and single-use articles by separating the poisonous or toxic materials by spacing or partitioning; and storing them in an area that is not above food, equipment, utensils, linens, and single-service or single-use articles. Instructed PIC to move chemicals to an approved location.

Observed poisonous or toxic materials stored in a manner that has the potential to contaminate utensils. Poisonous/Toxic Substance and Location: Eye glass cleaner stored inside soup bowl in clean dish area storage rack, glass cleaner stored next to stainless steel pans and above dish ware, foam sealant stored on prep table next to raw chicken.

Violation: Thawing

• Thawing Method

- Freezing prevents microbial growth in foods, but usually does not destroy all microorganisms. Improper thawing provides an opportunity for surviving bacteria to grow to harmful numbers and/or produce toxins. Food must be thawed in an approved method such as: A. under refrigeration maintaining food below forty-one (41) °F or below, B. submerged under running water at seventy (70) °F, or below with sufficient velocity to agitate and float off loose particles in the overflow, if ready-to-eat does not go above forty-one (41) °F, or if raw does not exceed forty-one (41) °F for four (4) hours including the cooking or re-cooling process C. in a microwave oven only when the food will be immediately transferred to conventional cooking facilities as part of a continuous cooking process, or when the entire, uninterrupted cooking process takes place in the microwave oven D. as part of the cooking process E. prepared for immediate service in response to an individual consumer's order Instructed PIC to retrain food employees on thawing food.

Observed frozen time/temperature control for safety food improperly thawing. Food: Raw chicken and raw goat Location: Two compartment sink Condition: Chicken was thawed and goat was still frozen Method: Stored at room temperature

Violation: Pest Control

• Removing Dead or Trapped Birds, Insects, Rodents and other Pest

- Dead or trapped birds, insects, rodents, and other pests shall be removed from control devices and the premises at a frequency that prevents their accumulation, decomposition, or the attraction of pests. Instructed PIC that traps must be checked regularly and pests removed when possible or traps replaced when removal is not feasible for the trap type. Instructed PIC that the overfull traps observed must be replaced or emptied and reset.

Observed pests allowed to accumulate in traps. Location: Under dish machine and in dining room area Pest Type: Cockroaches

Pest Condition: Dead

Number of Pests Present: substantial amounts of cockroaches PIC did provide records of pest control fogging

Also, substantial amount of rodent dropping above chemicals on shelving next to automatic dish machine.

Violation: Date Marking and Disposition

• Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition

- Ready-to-eat, time/temperature control for safety food prepared in a food establishment and held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24-hour period inside the facility.

Observed ready-to-eat time and temperature controlled for safety food prepared and held within the establishment with no date marking indicators. Location: Standing reach in refrigerators Food Items: Prepared vegetables, soups, cooked meats, sauces, cooked potatoes etc. Expiration Dates: None available

Violation: Maintenance and Operation

• Cutting Surfaces

- Cutting surfaces such as cutting boards and blocks that become scratched and scored may be difficult to clean and sanitize. As a result, pathogenic microorganisms transmissible through food may buildup or accumulate. These microorganisms may be transferred to foods that are prepared on such surfaces. Instructed PIC to resurface the cutting board, or discard if not capable of being resurfaced.

Observed cutting surface with deep scratches and scoring which limit the ability to be effectively cleaned and sanitized. Location: On prep cold holding units Type: Cutting boards

Violation: Knowledgeable

• Knowledgeable Person In Charge

- A designated person in charge that is knowledgeable about foodborne disease prevention, the Food Code, and local ordinance requirements is prepared to recognize conditions that may contribute to foodborne illness or that otherwise fail to comply with food safety regulations and is authorized to take appropriate preventive and corrective actions. The person in charge may demonstrate knowledge by having no priority violations, being a certified food protection manager, responding correctly to an inspector's questions as they relate to specific food operations. Instructed PIC that additional food safety training is required in the areas that deficiency was shown.

Observed that the person in charge was unable to demonstrate knowledge of foodborne disease prevention and other requirements of the Food Code and local ordinances. Knowledge Tested: Asked PIC what hot and cold temperatures were supposed to be held at did not know. Asked PIC at what parts per million does chlorine sanitizer have to be held it did not know. Asked PIC about food borne illnesses did not know.

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

• Food Handler Cards

- Food Employees shall demonstrate their knowledge of safe Food handling practices through passing a test from a Food Handler Training Program, Approved by the Enforcement Authority, and possess a Valid Food Handler Card within thirty (30) days of employment in a Food Establishment unless the Food Employee is a Certified Food Protection Manager; the Food Employee does not prepare or handle TCS Food, provided that at a minimum, the Permit Holder assures the Food Employee complies with Part 16 of these rules; or The Food Employee is working as a Food Employee or volunteer of a Temporary Food Establishment or Charitable Food Provider, provided that at minimum, the Person In Charge is a Certified Food Protection Manager or has a Valid Food Handler Card. Instructed PIC to ensure that all food employees are properly trained in safe food handling practices.

Observed that food employees were not in possession of a food handler card or had been trained in another approved food safety course. Only one of four had food handler cards.

Violation: Ventilation and Hood Systems

• Ventilation Hood Systems, Filters

- Instructed PIC to make repairs or replace hood ventilation system to allow for filters or other grease extracting equipment to be readily removable for cleaning and replacement, or cleaned in place.

Observed filters or grease extracting equipment damaged with substantial gaps inside hood ventilation system Location: Inside main kitchen hood ventilation system. Manner: Substantial gaps and debris buildup.

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: plastic food containers Location: On main kitchen line shelving between cold holding units. Also, with old ticket chits stored inside spices.

Violation: Cold Holding

• Time/Temperature Control for Safety Food, Cold Holding

- Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.

Observed food items in cold holding unit measuring above 41°F. Location: Cold holding unit Food Items and Food temperature: Prepared meat in sauce 55 °F, Raw shrimp 74 °F, Hummus 58 °F, chopped green chile 66 °F, green curry 55 °F, red curry 59 °F, green curry sauce 53 °F, cooked meat and red curry 59 °F, cooked meat in sauce 58 °F, curry yellow mix 61 °F,

Violation: Storage

• Food Storage-Preventing Contamination from the Premises

- Unless food is stored on lot handling equipment or in water-proof containers, it must be stored at least six (6) inches above the floor. Storing food on the floor created opportunity for contamination and reduces the ease of cleanability in an area creating harborage for pests. Instructed PIC that food must be stored at least six (6) inches above the floor.

Observed food stored improperly less than six (6) inches off the floor. Location: Bag of onions and raw chicken

Violation: Testing Devices

• Food Temperature Measuring Devices

- The presence and accessibility of food temperature measuring devices is critical to the effective monitoring of food temperatures. Proper use of such devices provides the operator or person in charge with important information with which to determine if temperatures should be adjusted or if foods should be discarded. Instructed PIC to provide and make readily accessible food temperature measuring devices.

Observed food temperature measuring devices were not provided or readily accessible.

Violation: Designated Areas

• Designation-Dressing Areas and Lockers

- Personal belongings can contaminate food, food equipment, and food-contact surfaces. Proper storage facilities are required for articles such as purses, coats, shoes, and personal medications. Instructed PIC to create an area designated for personal belongings in which food, food equipment and utensils, clean linens, and single-service and single-use articles are not be in jeopardy of contamination from these areas.

Observed facility did not provide lockers or other suitable facilities for storage of employees clothing or other personal belongings.

Violation: Operation and Maintenance

• Handwashing Cleanser, Availability

- Hand cleanser must always be present to aid in reducing microorganisms and particulate matter found on hands. Each handwashing sink or group of 2 adjacent handwashing sinks shall be provided with a supply of hand cleanser. Instructed PIC to ensure that hand cleanser is available at all times of operation.

Observed no handwashing cleanser available at handwashing sink(s). Location: Only hand washing sink in main kitchen

• Hand Drying Provision

- Hand drying provisions must be provided for hand drying so that employees will not dry their hands on their clothing or other unclean materials which could re-contaminate hands. Each handwashing sink or group of 2 adjacent handwashing sinks shall be provided with: (A) individual, disposable towels (B) a continuous towel system that supplies the user with a clean towel (C) a heater-air hand drying device or (D) a hand drying device that employs an air-knife system that delivers high velocity, pressurized air at ambient temperatures. Instructed PIC to provide and ensure that hand drying provisions are available for each handwashing sink.

Observed no approved method of hand drying at handwashing sink(s). Location: Only hand washing sink inside kitchen.

• Using a Handwashing Sink-Operation and Maintenance

- Facilities must be maintained in a condition that promotes handwashing and restricted for that use. Convenient accessibility of a handwashing facility encourages timely handwashing which provides a break in the chain of contamination from the hands of food employees to food or food-contact surfaces. Handwashing sinks shall be maintained so that they are accessible at all time for employee use. Instructed PIC to make handwashing sink accessible and to retrain employees on ensuring handwashing sinks are properly maintained.

Observed handwashing sink(s) was observed blocked or inaccessible. Location: Only hand washing sink in main kitchen Manner: Duct tape covering sink basin drain. When PIC was asked, they stated he was not using it due to no cold water available. Stated he had a sign informing employees it was non-operational but they had removed it. PIC stated when reviewing violations that the plumbing was leaking underneath hand washing sink is also why was not operational.

Violation: Functionality and Accuracy

• Temperature Measuring Devices, Ambient Air and Water-Accuracy

- The placement of the temperature measuring device is important. If the device is placed in the coldest location in the storage unit, it may not be representative of the temperature of the unit. Food could be stored in areas of the unit that exceed temperature requirements for cold holding. Instructed PIC to move temperature measuring device to the warmest part of the cold holding unit to ensure that all areas of the storage unit are maintaining proper cold holding temperatures.

Observed in a mechanically refrigerated food storage unit the temperature measuring device was not placed in the warmest part of the unit. Equipment Location: Inside cold holding units Thermometer Location: None available

Violation: Personal Cleanliness

• Prohibition-Jewelry

- Items of jewelry such as rings, bracelets, and watches may collect soil and the construction of the jewelry may hinder routine cleaning. As a result, the jewelry may act as a reservoir of pathogenic organisms transmissible through food. An additional hazard associated with jewelry is the possibility that pieces of the item or the whole item itself may fall into the food being prepared. Hard foreign objects in food may cause medical problems for consumers, such as chipped and/or broken teeth and internal cuts and lesions. Except for a plain ring such as a wedding band, while preparing food, food employees may not wear jewelry including medical information jewelry on their arms and hands. Instructed PIC to retrain employees on personal cleanliness requirements.

Observed employee wearing unapproved jewelry while preparing food. Food Preparation Activity: Preparing entrees and preparing raw chicken Inappropriate Jewelry Observed: Watch

• Effectiveness-Hair Restraints

- Hair can be both a direct and indirect vehicle of contamination. Food employees may contaminate their hands when they touch their hair. A hair restraint keeps dislodged hair from ending up in the food and may deter employees from touching their hair. Food employees must wear hair restraints such as hats, hair coverings or nets, beard restraints, and clothing that covers body hair, that are designed and worn to effectively keep their hair from contacting exposed food, clean equipment, utensils, and linens; and unwrapped single-service and single-use articles. Instructed PIC to retrain food employees on proper hair restraints.

Observed a food employee without proper hair restraints. Location: Main kitchen line Activity: Multiple employees preparing food with no hair restraints.

• Eating, Drinking, or Using Tobacco Products

- A food employee may drink from a closed beverage container if the container is handled to prevent the contamination of the employee's hands, the container, and exposed food, clean equipment, utensils, linens, and unwrapped single-service and single-use articles. Instructed PIC that employee drinks should be kept in a designated area and should be in a cup with a lid and straw.

Observed a food employee with an improper drink. Location: Stored on cutting board
Type of Drink: Refillable twist top water bottle

Violation: Operations

• Valid Permit

- Instructed the PIC that no person is allowed to operate a Food Establishment in the City without a valid permit to operate issued by the Enforcement Authority for that Food Establishment.

Observed that the facility was operating with an expired permit.

Violation: Hands Clean & Properly Washed

• When to Wash

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands.

Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

Observed food employee not wash hands when required. Condition: Not a single employee washed their hands during the inspection. After donning new gloves, entering and exiting the kitchen, switching job duties etc.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on all areas and to clean and sanitize all areas.

Observed buildup and debris underneath kitchen equipment such as underneath stove tops, fryer, automatic dish machine, shelving and underneath cold holding units, inside cold holding units, on shelving on main kitchen line and back area next to non-functional walk-in refrigerator.

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored,

thawed, cooled, prepared, displayed, dispensed, or transported.

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: Cooked meats, prepared vegetables, sauces, soups etc. Activity of the Food: Stored, cooled, received

CVS PHARMACY INC 8915 - 9640 MENAUL BLVD NE - Approved

CVS PHARMACY INC 8915 - 9640 MENAUL BLVD NE

Retail Food Establishment Class 3

Date: 07/23/2026 - #: PT0108416 - Inspection Result: Approved

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located In the display ice cream freezer The condition of the surface was Debris buildup

DAIRY QUEEN ORANGE JULIUS - 6370 COORS BLVD NW - Approved

DAIRY QUEEN ORANGE JULIUS - 6370 COORS BLVD NW

Food Establishment Class C

Date: 07/20/2026 - #: PT0154836 - Inspection Result: Approved

Violation: Plumbing

• Backflow Prevention, Air Gap

- During periods of extraordinary demand, drinking water systems may develop negative pressure in portions of the system. If a connection exists between the system and a source of contaminated water during times of negative pressure, contaminated water may be drawn into and foul the entire system. Standing water in sinks, dipper wells, steam kettles, and other equipment may become contaminated with cleaning chemicals or food residue. To prevent the introduction of this liquid into the water supply through back siphonage, various means may be used. The water outlet of a drinking water system must not be installed so that it contacts water in sinks, equipment, or other fixtures that use water. Providing an air gap between the water supply outlet and the flood level rim of a plumbing fixture or equipment prevents contamination that may be caused by backflow. Instructed PIC to contact repair personnel to have an air gap established to prevent backflow.

Observed an inadequate air gap at the ice machine discharge tubing inside the drain touching the bottom.

Violation: Testing Devices

• Food Temperature Measuring Devices

- The presence and accessibility of food temperature measuring devices is critical to the effective monitoring of food temperatures. Proper use of such devices provides the operator or person in charge with important information with which to determine if temperatures should be adjusted or if foods should be discarded. Instructed PIC to provide and make readily accessible food temperature measuring devices.

Observed food temperature measuring devices were not provided or readily accessible for the measuring of thin foods and or refrigerators and freezers for ambient air temperatures.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on under equipment and prep tables and shelving. to clean and sanitize Areas noted.

Observed buildup and debris on the floors under equipment and prep tables, shelving.

DOMINOS PIZZA #6521 - 1512 WYOMING BLVD NE, A B - Approved

DOMINOS PIZZA #6521 - 1512 WYOMING BLVD NE, A B

Food Establishment Class C

Date: 07/21/2026 - #: PT0138848 - Inspection Result: Approved

Complaint

This inspection was the result of a complaint received by the Department and was unsubstantiated.

Violation: Cold Holding

• Time/Temperature Control for Safety Food, Cold Holding

- Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.

Observed food items in cold holding unit measuring above 41°F. Location: Walk in refrigerator and Make line probe 2 Food Items and Temperature: Chopped green chile 75 °F, Chopped chicken breast 46 °F, penne pasta 47 °F, cooked chicken wings 49 °F,

Violation: Designated Areas

• **Designated Areas-Employee Accommodations for eating/drinking/smoking**

- Employees could introduce pathogens to food by hand-to-mouth-to-food contact areas. Instructed PIC to create a designated to accommodate employees personal which food, food equipment and utensils, clean linens, and single-service and single-use articles must not be in jeopardy of contamination from these areas.

Observed facility did not provide a designated area for employees to eat, drink, or use tobacco products.

Violation: Personal Cleanliness

• **Prohibition-Jewelry**

- Items of jewelry such as rings, bracelets, and watches may collect soil and the construction of the jewelry may hinder routine cleaning. As a result, the jewelry may act as a reservoir of pathogenic organisms transmissible through food. An additional hazard associated with jewelry is the possibility that pieces of the item or the whole item itself may fall into the food being prepared. Hard foreign objects in food may cause medical problems for consumers, such as chipped and/or broken teeth and internal cuts and lesions. Except for a plain ring such as a wedding band, while preparing food, food employees may not wear jewelry including medical information jewelry on their arms and hands. Instructed PIC to retrain employees on personal cleanliness requirements.

Observed employee wearing unapproved jewelry while preparing food. Food Preparation Activity: Preparing dough and pizza Inappropriate Jewelry Observed: Watch

• **Eating, Drinking, or Using Tobacco Products**

- A food employee may drink from a closed beverage container if the container is handled to prevent the contamination of the employee's hands, the container, and exposed food, clean equipment, utensils, linens, and unwrapped single-service and single-use articles. Instructed PIC that employee drinks should be kept in a designated area and should be in a cup with a lid and straw.

Observed a food employee with an improper drink.

Location: Table and stainless-steel wire shelving in dish area Type of Drink: Can soda and twist top water bottles.

Violation: Operations

• **Sticker Posted**

- Instructed the PIC that every Food Establishment must display the Grade received at the time of the most recent inspection in a place that is visible to the public.

Observed that no grade sticker was posted on the facility.

• **Permit Posted**

- Instructed PIC that the permit to operate must be posted in a conspicuous place on the premises of the Food Establishment and made available for examination by the Enforcement Authority. Advised PIC to update contact information with Consumer Health to log into ABQ-Plan to access and print permit. Consumer Health contact information is (505) 768-2716 or email at consumerhealth@cabq.gov.

Observed that no food permit was posted at the facility.

D's BBQ LLC - 1200 Wyoming Blvd NE - Conditional Approved

D's BBQ LLC - 1200 Wyoming Blvd NE

Food Establishment Class C

Date: 07/23/2026 - #: RT-FOODEST-047871-2025 - Inspection Result: Conditional Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch**

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Ice Machine Location: Back area Condition of the Location: Debris buildup.

Violation: Poisonous and Toxic/Chemical Substances

• **Common Name-Working Containers**

- When toxic or poisonous substances are purchased in bulk, it is common practice to divide the contents into working containers for use around the establishment. When working containers are not labeled, a risk of misuses or food contamination is created. Working containers used for storing poisonous or toxic materials such as cleaners and sanitizers taken from bulk supplies shall be clearly and individually identified with the common name of the material. Instructed PIC that the unlabeled containers and their contents must not be used in the operation of the food establishment unless it can be shown that there is an internal system where the contents are known and the containers can be labeled properly.

Observed working containers used for storing poisonous or toxic materials taken from bulk supplies not properly labeled or identified. Container Type: Spray bottle Alleged Material: Unknown

Violation: Training Records

• **Certified Food Protection Manager**

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be

certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Operation and Maintenance

• Hand Drying Provision

- Hand drying provisions must be provided for hand drying so that employees will not dry their hands on their clothing or other unclean materials which could re-contaminate hands. Each handwashing sink or group of 2 adjacent handwashing sinks shall be provided with: (A) individual, disposable towels (B) a continuous towel system that supplies the user with a clean towel (C) a heater-air hand drying device or (D) a hand drying device that employs an air-knife system that delivers high velocity, pressurized air at ambient temperatures. Instructed PIC to provide and ensure that hand drying provisions are available for each handwashing sink.

Observed no approved method of hand drying at handwashing sink(s). Location: Hand washing sink in cashier and inside kitchen.

Violation: Operations

• Valid Permit

- Instructed the PIC that no person is allowed to operate a Food Establishment in the City without a valid permit to operate issued by the Enforcement Authority for that Food Establishment. Provided facility with invoice to pay for permits.

Observed that the facility was operating with an expired permit.

• Permit Posted

- Instructed PIC that the permit to operate must be posted in a conspicuous place on the premises of the Food Establishment and made available for examination by the Enforcement Authority.

Observed that no food permit was posted at the facility.

EAT MY THAI CUISINE - 5303 GIBSON BLVD SE - Closure Re-Inspection Required

EAT MY THAI CUISINE - 5303 GIBSON BLVD SE

Food Establishment Class C

Date: 07/20/2026 - #: CAC-Food-068451-2026 - Inspection Result: Closure Re-Inspection Required

Facility will remain closed as cockroach activity was observed throughout the kitchen and other parts of the facility at the time of inspection.

Areas of concern for pest control include the make line wok stations, dry storage area in the previous walk-in cooler, make line prep table, behind dish pit, boiler room, and front dry storage area.

-Also observed the following violations that were also listed on the two other previous inspection reports.

- 1.) Ensure facility's ability to maintain hot and cold holding temperatures of food. Observed a reach in cooler at 46°F.
- 2.) Retrain employees on date marking and disposition. Several time temperature-controlled food items are still missing production / expiration dates.
- 3.) Cleaning and sanitizing all food and other debris from food and non-food contact surfaces so that they are clean to sight and touch. Kitchen floor and walls included.
- 5.) Continue pest control treatment to eradicate the facility of cockroaches. Including the removal of dead cockroaches.
- 6.) Develop and implement a detailed cleaning/sanitizing list for food contact and non-food contact surfaces for daily, weekly and monthly cleaning.
- 7.) Maintaining Premises, removing any necessary items, broken / unused equipment and litter throughout the facility.
- 8.) After performing all corrective actions as listed on the inspection report, request a follow-up inspection by providing proof of corrective actions taken.
- 9.) Seal off any holes, gaps or cracks in the physical facilities including door weather stripping and exterior.
- 10.) A re-inspection fee of \$150.00 dollars will be issued and must be paid before the next inspection can be scheduled.
- 11.) Abide and execute by the direction as outlined on the compliance plan
- 12.) Participate in a mandatory food safety course offered by the City of Albuquerque at no cost and must have all staff participate.

ELEMENT BY WESTIN ALBUQUERQUE UPTOWN - 2430 LOUISIANA BLVD NE – Approved

ELEMENT BY WESTIN ALBUQUERQUE UPTOWN - 2430 LOUISIANA BLVD NE

Food Establishment Class C

Date: 07/21/2026 - #: RT-FOODEST-058146-2025 - Inspection Result: Approved

Violation: Hot Holding & Reheating

• Time/Temperature Control for Safety Food, Hot Holding

- If food is held at improper temperatures for enough time, pathogens have the opportunity to multiply to dangerous numbers. Instructed PIC to rapidly reheat TCS foods to 165 F and to maintain temperature at 135 F and above.

Observed time/temperature control for safety food not hot held at 135°F or above. Food Item: Egg fritter

Food Temperature: 117°F

Violation: Testing Devices

• Sanitizing Solutions, Testing Devices

- Testing devices to measure the concentration of sanitizing solutions are required for 2 reasons: 1. The use of chemical sanitizers requires minimum concentrations of the sanitizer to ensure sanitization; and 2. Too much sanitizer could be toxic. Verified facility is utilizing the correct concentration level of sanitizer in the facility. Instructed PIC to acquire sanitizing solution testing kits or device.

Observed no testing kit or other device to measure the concentration of chemical sanitizing solution.

Violation: Operations

• **Valid Permit**

- Instructed the PIC that no person is allowed to operate a Food Establishment in the City without a valid permit to operate issued by the Enforcement Authority for that Food Establishment. Provided a 5-Day notice of nonpayment and the outstanding invoice(s) that must be paid to receive a valid permit.

Observed that the facility was operating with an expired permit.

GOLDEN CHOPSTICKS - 12251 ACADEMY RD NE, 104

Food Establishment Class C

Date: 07/21/2026 - #: RT-FOODEST-069095-2026 - Inspection Result: Conditional Approved

Violation: Use Limitations

• **Wiping Cloths, Use Limitation**

- Wiping cloths should be stored in a sanitizer solution to prevent pathogens from transferring to food. Change the sanitizer solution as needed to maintain proper concentration and avoid over-accumulation of organic material. Regular chemical test kits can ensure proper sanitizer concentration. While wiping down surfaces with reusable wet cloths is acceptable, it doesn't meet the requirements for cleaning and sanitizing food contact surfaces. Dry cloths and disposable towels are acceptable for situations where full cleaning isn't needed. To effectively clean and sanitize food contact surfaces, remove organic material with detergents or cleaners, then apply a sanitizing solution of appropriate temperature and chemical concentration. The solution should stay on the surface for a specific contact time and follow the manufacturer's EPA-registered label. Instructed PIC to retrain employees on wiping cloths use requirements and restrictions and to discontinue misuse of wiping cloths.

Observed wiping cloths improperly used. Observed soiled wiping cloths stored on prep tables and cutting boards

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• **Food Storage Containers Identified with Common Name of Food**

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: Food bins of sugar, flour, corn starch Location: by walk in cooler

Violation: Storage

• **Food Storage-Preventing Contamination from the Premises**

- Food must be protected from contamination of splashing water, chemical, or other foods; dust; and other contaminants. Instructed PIC to have food protected in containers/wrapping and not to store food in those areas unless the source of contamination can be mediated another way.

Observed food stored improperly where it was exposed to contamination from splash, dust, or other contamination. Location: walk in cooler Food Item: all food items Condition: not covered

Violation: Testing Devices

• **Food Temperature Measuring Devices**

- The presence and accessibility of food temperature measuring devices is critical to the effective monitoring of food temperatures. Proper use of such devices provides the operator or person in charge with important information with which to determine if temperatures should be adjusted or if foods should be discarded. Instructed PIC to provide and make readily accessible food temperature measuring devices.

Observed food temperature measuring devices were not provided or readily accessible.

• **Sanitizing Solutions, Testing Devices**

- Testing devices to measure the concentration of sanitizing solutions are required for 2 reasons: 1. The use of chemical sanitizers requires minimum concentrations of the sanitizer to ensure sanitization; and 2. Too much sanitizer could be toxic. Verified facility is utilizing the correct concentration level of sanitizer in the facility. Instructed PIC to acquire sanitizing solution testing kits or device.

Observed no testing kit or other device to measure the concentration of chemical sanitizing solution.

Violation: Operation and Maintenance

• **Cleaning of Handwashing Fixtures**

- Handwashing facilities are critical to food protection and must be maintained in operating order at all times so they will be used. Handwashing sinks shall be cleaned as often as necessary to keep them clean. Instructed PIC to clean handwashing sink(s).

Observed handwashing fixtures with the buildup of soil residues. The plumbing fixture was located at the handwashing sink on main cook line. The condition of the surface was heavy debris buildup.

• **Handwashing Signage**

- In order to remind food employees to wash their hands a clearly visible sign or poster that notifies food employees to wash their hands shall be provided at all handwashing sinks used by food employees. Instructed PIC to install handwashing signage at all handwashing sinks.

Observed handwashing sink(s) without a handwashing sign. Location: Bathroom

Violation: Personal Cleanliness

• **Prohibition-Jewelry**

- Items of jewelry such as rings, bracelets, and watches may collect soil and the construction of the jewelry may hinder routine cleaning. As a result, the jewelry may act as a reservoir of pathogenic organisms transmissible through food. An additional hazard associated with jewelry is the possibility that pieces of the item or the whole item itself may fall into the food being prepared. Hard foreign objects in food may cause medical problems for consumers, such as chipped and/or broken teeth and internal cuts and lesions. Except for a plain ring such as a wedding band, while preparing food, food employees may not wear jewelry including medical information jewelry on their arms and hands. Instructed PIC to retrain employees on personal cleanliness requirements.

Observed employee wearing unapproved jewelry while preparing food. Food Preparation Activity: Actively working with open food items. Inappropriate Jewelry Observed: Bracelets and watches

Violation: Hands Clean & Properly Washed

• **When to Wash**

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands. Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

Observed food employee not wash hands when required. Condition: Not one employee has washed hands during the inspection. Observed employees changing tasks. Observed Employee smashing down trash in trash can then sweeping then return to prepping open food items

Violation: Consumer Advisories

• **Allergen Warning, Unpackaged Food**

- Unintended food allergen food allergen exposures pose a serious risk to consumers with food allergies. Consumers with food allergies depend on allergen information, written notification of the presence of major food allergens as an ingredient in unpackaged foods that are served or sold by the food establishment must be provided. Written notification can be provided in many forms such as: physical or electronic means, including, but not limited to, brochures, deli case or menu notifications, label statements, table tents, placards, or other effective written means. Notifying the consumer to the presence of major food allergens may prevent an inadvertent exposure. Instructed PIC to provide written notification of major allergen information for all unpackaged food offered for sale or served to consumers.

Observed no written notification of the presence of major food allergens for unpackaged food served or sold to consumers.

Violation: Storage

• **In-Use Utensils, Between-Use Storage**

- Multiuse utensils which have been cleaned and sanitized can become contaminated with pathogens which can be transferred to food from utensils that have been stored on surfaces which have not been cleaned and sanitized. Instructed PIC to clean and sanitize utensils prior to continuing use, must be maintained cleaned in a regular schedule as prescribed by the code and to store items so that the risk of contamination prior to use is minimized.

Observed utensils during a pause in use stored incorrectly. Utensil was stored in food with their handle not above the top of the food and the container. Utensil Type: cups Location: by walk in cooler Condition of the Location: cups stored in food bins directly touching the food product inside

• **Equipment, Utensils, Linens and Single-Service and Single-Use Articles Storing**

- Clean equipment and multiuse utensils which have been cleaned and sanitized, laundered linens, and single-service and single-use articles can become contaminated before their intended use in a variety of ways such as through water leakage, pest infestation, or other insanitary condition. Clean equipment, utensils, linens, and single-service and single-use articles must be stored in a clean, dry location, protected from contamination, and at least six (6) inches above the floor. Equipment and utensils must be stored so that they are in a self-draining and inverted position or are covered. Single-service and single-use articles should be kept in the original packaging until use. Instructed PIC to store items so that the risk of contamination prior to use is minimized.

Observed cleaned single-service and single-use articles stored improperly. Single-service and single-use articles was not stored six (6) inches above the floor. Single-service and single-use articles Type: to go Rectangular boxes Storage Method: Stored directly on the floor Location: back of dining room

Violation: Records

• **Temperature Logs**

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: All TCS food items Activity of the Food: cooled,

stored

• **Calibration Logs**

- Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment

Observed the food establishment does not have calibration logs for temperature measuring devices.

GOLDEN CHOPSTICKS - 12251 ACADEMY RD NE, 104

Food Establishment Class C

Date: 07/21/2026 - #: PT0159230 - Inspection Result: Closure Re-Inspection Required

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch**

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Can opener Location: back of kitchen prep area Condition of the Location: dried caked on food debris on blade of can opener

Violation: Poisonous and Toxic/Chemical Substances

• **Common Name-Working Containers**

- When toxic or poisonous substances are purchased in bulk, it is common practice to divide the contents into working containers for use around the establishment. When working containers are not labeled, a risk of misuses or food contamination is created. Working containers used for storing poisonous or toxic materials such as cleaners and sanitizers taken from bulk supplies shall be clearly and individually identified with the common name of the material. Instructed PIC that the unlabeled containers and their contents must not be used in the operation of the food establishment unless it can be shown that there is an internal system where the contents are known and the containers can be labeled properly.

Observed working containers used for storing poisonous or toxic materials taken from bulk supplies not properly labeled or identified. Container Type: Spray bottles Alleged Material: Degreaser and Rubbing Alcohol

Violation: Use Limitations

• **Wiping Cloths, Use Limitation**

- Wiping cloths should be stored in a sanitizer solution to prevent pathogens from transferring to food. Change the sanitizer solution as needed to maintain proper concentration and avoid over-accumulation of organic material. Regular chemical test kits can ensure proper sanitizer concentration. While wiping down surfaces with reusable wet cloths is acceptable, it doesn't meet the requirements for cleaning and sanitizing food contact surfaces. Dry cloths and disposable towels are acceptable for situations where full cleaning isn't needed. To effectively clean and sanitize food contact surfaces, remove organic material with detergents or cleaners, then apply a sanitizing solution of appropriate temperature and chemical concentration. The solution should stay on the surface for a specific contact time and follow the manufacturer's EPA-registered label. Instructed PIC to retrain employees on wiping cloths use requirements and restrictions and to discontinue misuse of wiping cloths.

Observed wiping cloths improperly used. Observed soiled wiping cloths stored on prep tables and cutting boards

Violation: Date Marking and Disposition

• **Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition**

- Ready-to-eat, time/temperature control for safety food prepared in a food establishment and held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24-hour period inside the facility. PIC voluntarily discarded food items bearing no date markings.

Observed ready-to-eat time and temperature controlled for safety food prepared and held within the establishment with no date marking indicators. Location: Walk in and prep top coolers Food Items: All TCS food items Expiration Dates: No dates observed

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• **Food Storage Containers Identified with Common Name of Food**

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: Food bins of sugar, flour, corn starch Location: by walk in cooler

Violation: Food Separation

• **Packaged and Unpackaged Food-Separation, Packaging, and Segregation, Cross Contamination**

- It is important to separate foods in a ready-to-eat form from raw animal foods during storage, preparation, holding and display to prevent them from becoming contaminated by pathogens that may be present in or on the raw animal foods. Except when frozen or combined as ingredients; non-ready-to-eat raw animal

foods must be separated from ready-to-eat raw animal foods such as molluscan shellfish or fish for sushi, or other raw ready to eat food, cooked ready-to-eat food, and fruits and vegetables prior to washing. Instructed PIC that the food not separated from the non-ready-to-eat raw animal food must not be used in the food operation or must be cooked to a temperature sufficient to act as a kill step for pathogens. Instructed PIC to store foods in a manner that protects ready-to-eat food from contamination.

Observed non-ready-to-eat raw animal food stored with ready-to-eat food without protection from contamination. Location: Walk in cooler Food Item: Raw Chicken and raw meat Condition: Raw meat in bag stored directly on top of lo mien noodles. Raw Chicken stored directly above cooked chicken

Violation: Storage

• Food Storage-Preventing Contamination from the Premises

- Food must be protected from contamination of splashing water, chemical, or other foods; dust; and other contaminants. Instructed PIC to have food protected in containers/wrapping and not to store food in those areas unless the source of contamination can be mediated another way.

Observed food stored improperly where it was exposed to contamination from splash, dust, or other contamination. Location: walk in cooler Food Item: all food items Condition: not covered

Violation: Testing Devices

• Food Temperature Measuring Devices

- The presence and accessibility of food temperature measuring devices is critical to the effective monitoring of food temperatures. Proper use of such devices provides the operator or person in charge with important information with which to determine if temperatures should be adjusted or if foods should be discarded. Instructed PIC to provide and make readily accessible food temperature measuring devices.

Observed food temperature measuring devices were not provided or readily accessible.

• Sanitizing Solutions, Testing Devices

- Testing devices to measure the concentration of sanitizing solutions are required for 2 reasons: 1. The use of chemical sanitizers requires minimum concentrations of the sanitizer to ensure sanitization; and 2. Too much sanitizer could be toxic. Verified facility is utilizing the correct concentration level of sanitizer in the facility. Instructed PIC to acquire sanitizing solution testing kits or device.

Observed no testing kit or other device to measure the concentration of chemical sanitizing solution.

Violation: Operation and Maintenance

• Cleaning of Handwashing Fixtures

- Handwashing facilities are critical to food protection and must be maintained in operating order at all times so they will be used. Handwashing sinks shall be cleaned as often as necessary to keep them clean. Instructed PIC to clean handwashing sink(s).

Observed handwashing fixtures with the buildup of soil residues. The plumbing fixture was located at the handwashing sink on main cook line The condition of the surface was heavy debris buildup

• Handwashing Signage

- In order to remind food employees to wash their hands a clearly visible sign or poster that notifies food employees to wash their hands shall be provided at all handwashing sinks used by food employees. Instructed PIC to install handwashing signage at all handwashing sinks.

Observed handwashing sink(s) without a handwashing sign. Location: Bathroom

Violation: Warewashing Temperature and Concentration

• Sanitizers, Criteria-Chemicals

- Chemical sanitizers may be toxic if not used in accordance with requirements listed in the Code of Federal Regulations (CFR). Large concentrations of sanitizer in excess of the CFR requirements can be harmful because residues of the materials remain. Instructed PIC that sanitizer concentration levels must be within manufacturers guidelines and the CFR. PIC corrected violation by diluting sanitizer solution

Observed chemical sanitizer concentration exceeding the maximum level permitted. Type of Sanitizer: Chlorine Location: wiping cloth bucket Concentration: 200ppm

Violation: Personal Cleanliness

• Prohibition-Jewelry

- Items of jewelry such as rings, bracelets, and watches may collect soil and the construction of the jewelry may hinder routine cleaning. As a result, the jewelry may act as a reservoir of pathogenic organisms transmissible through food. An additional hazard associated with jewelry is the possibility that pieces of the item or the whole item itself may fall into the food being prepared. Hard foreign objects in food may cause medical problems for consumers, such as chipped and/or broken teeth and internal cuts and lesions. Except for a plain ring such as a wedding band, while preparing food, food employees may not wear jewelry including medical information jewelry on their arms and hands. Instructed PIC to retrain employees on personal cleanliness requirements.

Observed employee wearing unapproved jewelry while preparing food. Food Preparation Activity: Actively working with open food items Inappropriate Jewelry Observed: Bracelets and watches

Violation: Hands Clean & Properly Washed

• When to Wash

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands.

Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

Observed food employee not wash hands when required. Condition: Not one employee has washes hands during the inspection. Observed employees changing tasks. Observed Employee smashing down trash in trash can then sweeping then return to prepping open food items

Violation: Consumer Advisories

• Allergen Warning, Unpackaged Food

- Unintended food allergen food allergen exposures pose a serious risk to consumers with food allergies. Consumers with food allergies depend on allergen information, written notification of the presence of major food allergens as an ingredient in unpackaged foods that are served or sold by the food establishment must be provided. Written notification can be provided in many forms such as: physical or electronic means, including, but not limited to, brochures, deli case or menu notifications, label statements, table tents, placards, or other effective written means. Notifying the consumer to the presence of major food allergens may prevent an inadvertent exposure. Instructed PIC to provide written notification of major allergen information for all unpackaged food offered for sale or served to consumers.

Observed no written notification of the presence of major food allergens for unpackaged food served or sold to consumers.

Violation: Storage

• In-Use Utensils, Between-Use Storage

- Multiuse utensils which have been cleaned and sanitized can become contaminated with pathogens which can be transferred to food from utensils that have been stored on surfaces which have not been cleaned and sanitized. Instructed PIC to clean and sanitize utensils prior to continuing use, must be maintained cleaned in a regular schedule as prescribed by the code and to store items so that the risk of contamination prior to use is minimized.

Observed utensils during a pause in use stored incorrectly. Utensil was stored in food with their handle not above the top of the food and the container. Utensil Type: cups Location: by walk in cooler Condition of the Location: cups stored in food bins directly touching the food product inside

• Equipment, Utensils, Linens and Single-Service and Single-Use Articles Storing

- Clean equipment and multiuse utensils which have been cleaned and sanitized, laundered linens, and single-service and single-use articles can become contaminated before their intended use in a variety of ways such as through water leakage, pest infestation, or other insanitary condition. Clean equipment, utensils, linens, and single-service and single-use articles must be stored in a clean, dry location, protected from contamination, and at least six (6) inches above the floor. Equipment and utensils must be stored so that they are in a self-draining and inverted position or are covered. Single-service and single-use articles should be kept in the original packaging until use. Instructed PIC to store items so that the risk of contamination prior to use is minimized.

Observed cleaned single-service and single-use articles stored improperly. Single-service and single-use articles was not stored six (6) inches above the floor. Single-service and single-use articles Type: to go Rectangular boxes Storage Method: Stored directly on the floor Location: back of dining room

Violation: Single-Service

• Single-Service and Single-Use Articles-Use Limitations

- Single-service and single-use articles may not be reused. Articles that are not constructed of multiuse materials may not be reused as they are unable to withstand the rigors of multiple uses, including the ability to be subjected to repeated washing, rinsing, and sanitizing. Instructed PIC that all single-service and single-use articles being reused must be replaced with multiuse containers and/articles.

Observed single-use containers being re-used. Location: Walk in cooler Use: Observed Raw chicken boxes being reused to hold cooked chicken

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: All TCS food items Activity of the Food: cooled, stored

• Calibration Logs

- Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment

Observed the food establishment does not have calibration logs for temperature measuring devices.

JIMMY'S CAFE - 7007 JEFFERSON ST NE, F - Approved

JIMMY'S CAFE - 7007 JEFFERSON ST NE, F

Food Establishment Class C

Date: 07/21/2026 - #: PT0159693 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: ice machine. Location: interior surfaces and ice machine chute
Condition of the Location: observed buildup and dark colored debris on the interior surfaces of the ice machine.

Violation: Lighting

- **Intensity-Lighting**

- Instructed PIC to replace or repair lighting to permit the conducting of operations safely, and thorough cleaning.

Observed inadequate amount of lighting. Location: walk in cooler. Manner: Observed the lighting is very dim. Inspector had to use flashlight to see the interior of walk-in cooler.

Violation: Hands Clean & Properly Washed

- **When to Wash**

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands.

Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

Observed food employee not wash hands when required. Condition: observed employee don new single use gloves without washing hands prior to.

KFC - 12921 CENTRAL AVE NE - Approved

KFC - 12921 CENTRAL AVE NE

Food Establishment Class C

Date: 07/23/2026 - #: RT-FOODEST-067886-2026 - Inspection Result: Approved

Violation: Pest Control

- **Removing Dead or Trapped Birds, Insects, Rodents and other Pest**

- Dead or trapped birds, insects, rodents, and other pests shall be removed from control devices and the premises at a frequency that prevents their accumulation, decomposition, or the attraction of pests. Instructed PIC that traps must be checked regularly and pests removed when possible or traps replaced when removal is not feasible for the trap type. Instructed PIC that the overfull traps observed must be replaced or emptied and reset.

Observed pests allowed to accumulate in Facility Location: Chemical storage room and Dining room Pest Type: cockroach

Pest Condition: dead

Number of Pests Present: 18

Violation: Date Marking and Disposition

- **Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition**

- Ready-to-eat, time/temperature control for safety food prepared in a food establishment and held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24-hour period inside the facility. PIC voluntarily discarded food items bearing no date markings.

Observed ready-to-eat time and temperature controlled for safety food prepared and held within the establishment with no date marking indicators. Location: Walk in cooler Food Items: Mac & Cheese Expiration Dates: no dates observed

Violation: Physical Facilities

- **Outer Openings, Protected**

- The presence of insects and rodents is minimized by protecting outer openings to the food establishment. Outer openings of a food establishment shall be protected against the entry of insects and rodents by having solid, self-closing, tight-fitting doors. Instructed PIC to repair or replace the doors so that they are solid, self-closing, and tight-fitting. Light should not be seen through the door when closed. Self-closing doors are not required when they are exit doors that are solid and tight-fitting, designated as an emergency exit, or have limited use.

Observed doors to the outside that are not tight fitting, light can be seen at the edges. Front doors on east side of building has small holes in bottom of door and light can be seen coming in

Violation: Storage

- **Equipment and Utensils, Air-Drying Required**

- Items must be allowed to drain and to air-dry before being stacked or stored. Stacking wet items such as pans prevents them from drying and may allow an environment where microorganisms can begin to grow. Instructed PIC to allow items to be air-dried, and to retrain staff on preventing wet stacking.

Observed equipment was not air dried and was wet stacked. Location: ware washing area Equipment Type food Service pans Manner: not air dried and stacked wet

Violation: Surface Not Clean

- **Nonfood Contact Surfaces - Cleaning Frequency**

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located on the back plate of soda machines with heavy syrup and debris

buildup. The sides of three compartment sink with heavy debris buildup, Dining room windows with food debris buildup, and gas/water/electric pipes in kitchen with grease buildup.

KINDER CARE LEARNING CTR. INC. - 5101 MONTANO RD NW - Approved

KINDER CARE LEARNING CTR. INC. - 5101 MONTANO RD NW

Food Establishment Class C

Date: 07/20/2026 - #: RT-FOODEST-077995-2025 - Inspection Result: Approved

Violation: Poisonous and Toxic/Chemical Substances

• Separation-Storage

- The storage of poisonous or toxic materials directly above or adjacent to food could result in contamination of the food from spillage. Poisonous or toxic materials must be stored so they cannot contaminate food, equipment, utensils, linens, and single-service and single-use articles by separating the poisonous or toxic materials by spacing or partitioning; and storing them in an area that is not above food, equipment, utensils, linens, and single-service or single-use articles. Instructed PIC to move chemicals to an approved location.

Observed poisonous or toxic materials stored in a manner that has the potential to contaminate single-service and single-use articles. Poisonous/Toxic Substance: Hand soap.

Location: Hand soap dispenser above prep sink where food is being prepped and served

Violation: Plumbing

• System Maintained in Good Repair

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

Observed three compartment sink ball valve is not maintained in good repair or is not repaired by law. Observed ball valve found in disrepair by leaking.

Violation: Physical Facilities

• Outer Openings, Protected

- The presence of insects and rodents is minimized by protecting outer openings to the food establishment. Outer openings of a food establishment shall be protected against the entry of insects and rodents by having solid, self-closing, tight-fitting doors. Instructed PIC to repair or replace the doors so that they are solid, self-closing, and tight-fitting. Light should not be seen through the door when closed. Self-closing doors are not required when they are exit doors that are solid and tight-fitting, designated as an emergency exit, or have limited use.

Observed doors to the outside that are not tight fitting, light can be seen at the edges. Kitchen receiving door bottom.

Violation: Operation and Maintenance

• Handwashing Signage

- In order to remind food employees to wash their hands a clearly visible sign or poster that notifies food employees to wash their hands shall be provided at all handwashing sinks used by food employees. Instructed PIC to install handwashing signage at all handwashing sinks

Observed handwashing sink(s) without a handwashing sign. Location: Employee's restroom.

Violation: Hot & Cold-Water Availability & Pressure

• Water Capacity-Quantity and Availability

- Hot water required for washing items such as equipment and utensils and employees' hands, must be available in sufficient quantities to meet demand during peak water usage periods. must reach a temperature of 85 °F.

Observed facility with insufficient hot water. Location: Employees Restroom

Manner: How water was run for 1.5 minutes and temperature only reached 71 °F

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on the floors under three compartment sinks, cupboards shelving, three compartments sink drain.

Observed buildup and debris on the floors under three compartment sinks, cupboards shelving three compartment sinks drain.

LA CATRINA - 8810 CENTRAL AVE SE - Approved

LA CATRINA - 8810 CENTRAL AVE SE

Mobile Food Unit Class C

Date: 07/21/2026 - #: PT0156366 - Inspection Result: Approved

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported.

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: Salsa, cooked meats, raw meats, prepared vegetables Activity of the Food: Stored, cooled, received

Violation: Records

• Mobile Visit logs

- Mobile food establishments must visit their commissary each day of operation and keep a log of visits to be made available to EHD for inspection. Instructed the PIC to obtain visit logs from the commissary and provide them to EHD for review, and to maintain a copy of those records on the mobile food establishment at all times.

Observed that the mobile food establishment was unable to provide a log of visits to it's commissary.

• Mobile Valid Commissary Agreement

- Mobile food establishments are required to operate from a commissary. When the commissary is not owned/operated by the PIC of the mobile food establishment, a commissary agreement must be in place and kept valid. Instructed PIC to provide a copy of the mobile food establishments valid commissary agreement to EHD for review.

Observed that the mobile food establishment was not in possession of a valid commissary agreement.

LA PETITE ACADEMY INC. - 7615 ANAHEIM AVE NE - Approved

LA PETITE ACADEMY INC. - 7615 ANAHEIM AVE NE

Food Establishment Class C

Date: 07/22/2026 - #: RT-FOODEST-011259-2025 - Inspection Result: Approved

Violation: Plumbing

• Backflow Prevention, Air Gap

- During periods of extraordinary demand, drinking water systems may develop negative pressure in portions of the system. If a connection exists between the system and a source of contaminated water during times of negative pressure, contaminated water may be drawn into and foul the entire system. Standing water in sinks, dipper wells, steam kettles, and other equipment may become contaminated with cleaning chemicals or food residue. To prevent the introduction of this liquid into the water supply through back siphonage, various means may be used. The water outlet of a drinking water system must not be installed so that it contacts water in sinks, equipment, or other fixtures that use water. Providing an air gap between the water supply outlet and the flood level rim of a plumbing fixture or equipment prevents contamination that may be caused by backflow. Instructed PIC to contact repair personnel to have an air gap established to prevent backflow.

Observed an inadequate air gap at drain pipe for three compartment sink. Observed drain pipe is too long and is inside the floor drain below flood level rim.

LA PETITE ACADEMY INC. - 12215 TOWNER AVE NE

Food Establishment Class C

Date: 07/20/2026 - #: RT-FOODEST-010719-2025 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Can opener and Food wedger Location: Kitchen area Condition of the Location: Dried food debris buildup

Violation: Poisonous and Toxic/Chemical Substances

• Common Name-Working Containers

- When toxic or poisonous substances are purchased in bulk, it is common practice to divide the contents into working containers for use around the establishment. When working containers are not labeled, a risk of misuses or food contamination is created. Working containers used for storing poisonous or toxic materials such as cleaners and sanitizers taken from bulk supplies shall be clearly and individually identified with the common name of the material. Instructed PIC that the unlabeled containers and their contents must not be used in the operation of the food establishment unless it can be shown that there is an internal system where the contents are known and the containers can be labeled properly.

Observed working containers used for storing poisonous or toxic materials taken from bulk supplies not properly labeled or identified. Container Type: Spray bottle Alleged Material: Bleach water

Violation: Pest Control

• Removing Dead or Trapped Birds, Insects, Rodents and other Pest

- Dead or trapped birds, insects, rodents, and other pests shall be removed from control devices and the premises at a frequency that prevents their accumulation, decomposition, or the attraction of pests. Instructed PIC that traps must be checked regularly and pests removed when possible or traps replaced when removal is not feasible for the trap type. Instructed PIC that the overfull traps observed must be replaced or emptied and reset.

Observed pests allowed to accumulate in traps. Location: Pots and pans cabinet and water heater closet Pest Type: Cockroach
Pest Condition: Dead Number of Pests Present: 2

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Package Integrity

- Food packages shall be in good condition and protect the integrity of the contents so that the food is not exposed to adulteration or potential contaminants. Instructed PIC to ensure all food with compromised packaging is not offered for sale and is segregated for return. OR PIC voluntarily discard food items in compromised packaging.

Observed food packaging not in good condition and failing to protect the integrity of the contents of the food from adulteration or potential contaminants. Packaged Food: Can of Salsa Location: Dry storage Condition: dented can

Violation: Operation and Maintenance

• Using a Handwashing Sink-Operation and Maintenance

- Handwashing facilities can become sources of contamination if the sinks used for other purpose such as for food preparation and warewashing. Instructed PIC to train food employees that handwashing facilities can be utilized for no other purpose other than handwashing.

Observed handwashing sink used for purpose other than handwashing. Location: kitchen area Manner: Employee rinsing dishes in handwashing sink

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located on the fan next to coolers The condition of the surface was dust buildup

Limra DBA Royal Hyderabad - 5760 McMahon NW BLVD, Ste B-E - Closure Re-Inspection Required

Food Establishment Class C

Date: 07/24/2026 - #: RT-FOODEST-056937-2026 - Inspection Result: Closure Re-Inspection Required

Complaint

This inspection was the result of a complaint received by the Department and was substantiated.

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed utensil food-contact surface with the buildup of soil residues. Utensil Type: spatulas and plates. prep tables. make tables. Location: Storage racks
Condition of the Location: Soiled utensils stored with clean utensils, substantial soil on prep tables and cutting boards.

Violation: Date Marking and Disposition

• Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition

- Ready-to-eat, time/temperature control for safety food prepared in a food establishment and held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24-hour period inside the facility. PIC voluntarily discarded food items bearing no date markings.

Observed ready-to-eat time and temperature controlled for safety food prepared and held within the establishment with no date marking indicators. Location: Make table, walk in cooler.

Food Items: Lolli pop chicken dated 6/14/26, 7/19/26 unknown food item and a 7/19/26 chicken marcella and other unknown food items such as sauces and dressings. fish with no dates.

Violation: Plumbing

• System Maintained in Good Repair, Repaired According to Law

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which

depends on sufficient volume and pressure to perform its intended functions.

Observed Scrapper sprayer sink is not maintained in good repair or is not repaired by law. Observed faucet leaking at hot and cold-water valves.

Violation: Cooling

• Cooling

- Instructed PIC to use an alternate method of cooling to minimize the opportunity for pathogen growth; recommended to utilize one or more methods such as
1) Place the food in a shallow pan 2) Separate the food into smaller or thinner portions 3) Use rapid cooling equipment 4) Stir the food in a container placed in an ice/water bath 5) Use containers that facilitate heat transfer 6) Only partially cover product, if protected from overhead contamination.

Observed TCS food items cooling in a method that does not facilitate the necessary rate of heat transfer to cool the food in an appropriate time frame. Location: Kitchen prep and cooking areas.

Food Items: unknown sauces left out at room temperatures once they were cooked.

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff. last inspection the chef did not pass his managers food handler's test.

Violation: Ventilation and Hood Systems

• Cleaning Ventilation Systems, Nuisance and Discharge Prohibition

- Instructed pic to clean and sanitize the hood and ventilation systems on a regular basis. to prevent from coming a source of contamination on ready to eat food items.

Observed interior intake and exhaust air ducts with debris buildup. Location: Throughout the food service areas.

Violation: Cold Holding

• Time/Temperature Control for Safety Food, Cold Holding

- Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.

Observed food items in cold holding unit measuring above 41°F. Location: make table and walk in freezer

. Food Items: Tofu in soup yellow 52 degrees, Yellow Cauli flower 50 degrees, orange sauce 47 degrees, green chopped peppers, 53 degrees Temperature raw chicken left out on prep table 53 degrees, Chicken in freezer 60 degrees temperature of the freezer 60 degrees: several items such as unknown sauces left out at room temperatures.

Violation: Storage

• Food Storage-Preventing Contamination from the Premises

- Storage of unpackaged food on undrained ice creates potential for increasing the microbial load of a food because, as the ice melts, pathogens from one food may be carried by water to other foods. The potential for contamination is reduced by continuous draining of melting ice. Except for whole raw fruits and vegetables; cut, raw vegetables such as celery or carrot stick or cut potatoes; and tofu or raw poultry or raw fish received immersed in ice during shipping; unpackaged food must not be stored in direct contact with undrained ice.

Observed unpackaged food improperly stored in contact with undrained ice. The packaging of the food was not sufficient to prevent the entry of water or the dripping of condensation on to the foods surface.

Location: walk in freezer.

Food Item: uncovered chicken drumsticks cooked not covered, also several sauces and food items in cooler such as onions, veggies, other unknown food items.

Violation: Operation and Maintenance

• Hand Drying Provision

- Hand drying provisions must be provided for hand drying so that employees will not dry their hands on their clothing or other unclean materials which could re-contaminate hands. Each handwashing sink or group of 2 adjacent handwashing sinks shall be provided with: (A) individual, disposable towels (B) a continuous towel system that supplies the user with a clean towel (C) a heater-air hand drying device or (D) a hand drying device that employs an air-knife system that delivers high velocity, pressurized air at ambient temperatures. Instructed PIC to provide and ensure that hand drying provisions are available for each handwashing sink.

Observed no approved method of hand drying at handwashing sink(s). Location: all three restrooms without Han drying towels.

Violation: Personal Cleanliness

• Eating, Drinking, or Using Tobacco Products

- A food employee may drink from a closed beverage container if the container is handled to prevent the contamination of the employee's hands, the container, and exposed food, clean equipment, utensils, linens, and unwrapped single-service and single-use articles. Instructed PIC that employee drinks should be kept in a designated area and should be in a cup with a lid and straw.

Observed a food employee with an improper drinks. Location: Kitchen prep tables

Type of Drink: Uncovered drink a black liquid substance

Violation: Disposition of Returned, Previously Served Or Reconditioned

• Discarding or Reconditioning Unsafe, Adulterated, or Contaminated Food

- Food shall be safe, unadulterated, and honestly presented. Pathogens may be transmitted from person to person through contaminated food. The potential spread of illness is limited when food is discarded if it may have been contaminated by employees who are infected, or are suspected of being infected, or by any person who otherwise contaminates it. Food may also be contaminated by other means that endanger their safety and present a serious potential hazard. Instructed PIC that food that is unsafe, adulterated, not honestly presented must not be served or offered for sale.

Observed food that is unsafe for consumption present inside the facility. Food: Chicken. Location: Walk in freezer.

Condition: unopen pan of cooked chicken stored on a storage rack water dripping from the vent of the ceiling onto the chicken.

Violation: Storage

• In-Use Utensils, Between-Use Storage

- During pauses in food preparation or dispensing, food preparation and dispensing utensils shall be stored: (A) In the food with their handles above the top of the food and the container; (B) In food that is not time/temperature control for safety food with their handles above the top of the food within containers or equipment that can be closed, such as bins of sugar, flour, or cinnamon; (C) On a clean portion of the food preparation table or cooking equipment only if the in-use utensil and the food-contact surface of the food preparation table or cooking equipment are cleaned and sanitized at a frequency specified under 4-602.11 and 4-702.11; (D) In running water of sufficient velocity to flush particulates to the drain, if used with moist food such as ice cream or mashed potatoes; (E) In a clean, protected location if the utensils, such as ice scoops, are used only with a food that is not time/temperature control for safety food; or (F) In a container of water if the water is maintained at a temperature of at least 57°C (135°F) and the container is cleaned at a frequency specified under Subparagraph 4-602.11(D)(7). Educated and informed PIC on how to properly store utensils.

Observed utensils during a pause in use stored incorrectly. Utensil was not stored on a clean and sanitized portion of the equipment. Utensil Type: on soiled food prep tops

Location: kitchen prep and cooking areas,

violation Condition of the Location: stored on dirty table surfaces.

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located Kitchen cooking areas

The surface was made out of Stainless-steel metal

The condition of the surface tables, shelving, storage racks, make tables, stoves sinks and dishwasher.

Violation: Physical Facilities, Construction and Repair

• Floors, Walls and Ceilings-Cleanability

- Wall and ceiling attachments, such as light fixtures, mechanical room ventilation system components, vent covers, wall mounted fans, ornamental objects, and other attachments, must be EASILY CLEANABLE, with the exception of what is mentioned in (B) of this section. (B) If wall and ceiling surfaces, decorative accessories, and other ambiance-enhancing items are maintained clean in a CONSUMER area, this criterion need not be met. Instructed person in charge to clean and sanitize all areas noted.

Observed Kitchen prep area floors and walls, drains and cooler and freezer areas with buildup and debris.

• Floor and Wall Junctions, Coved, and Enclosed or Sealed

- Floors, floor coverings, walls, wall coverings, and ceilings shall be designed, constructed, maintained and/or installed from materials so that they are SMOOTH and EASILY CLEANABLE. Instructed person in charge to Install ceiling tiles that are missing.

Observed Ceiling is not smooth and easily cleanable. The surface was located in the kitchen in front of freezer. missing the required ceiling tiles.

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items last temperatures taken 6/19/26. Food Items: Pam fret fish, tofu, Curry's, chicken, noodles, pork.

Date: 07/24/2026 - #: CAC-Food-070618-2026 - Inspection Result: Approved

Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition- Violation was corrected by discarding items past the 7 days

Due to corrections made Facility is back in the green approved status

LITTLE BUTTERFLIES LEARNING CENTER - 11216 PHOENIX AVE NE

Food Establishment Class C

Date: 07/24/2026 - #: RT-FOODEST-010036-2025 - Inspection Result: Conditional Approved

Violation: Date Marking and Disposition

• Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition

- Ready-to-eat, time/temperature control for safety food held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on ensuring the proper disposition of food items. PIC voluntarily discarded food items bearing no date markings.

Observed ready-to-eat time and temperature controlled for safety food held within the establishment exceeding the seven (7) day limit. Location: Upright cooler in kitchen Food Items: Tomato sauce and Turkey Expiration Dates: 7/09/26

Violation: Plumbing

• Backflow Prevention, Air Gap

- During periods of extraordinary demand, drinking water systems may develop negative pressure in portions of the system. If a connection exists between the system and a source of contaminated water during times of negative pressure, contaminated water may be drawn into and foul the entire system. Standing water in sinks, dipper wells, steam kettles, and other equipment may become contaminated with cleaning chemicals or food residue. To prevent the introduction of this liquid into the water supply through back siphonage, various means may be used. The water outlet of a drinking water system must not be installed so that it contacts water in sinks, equipment, or other fixtures that use water. Providing an air gap between the water supply outlet and the flood level rim of a plumbing fixture or equipment prevents contamination that may be caused by backflow. Instructed PIC to contact repair personnel to have an air gap established to prevent backflow.

Observed an inadequate air gap at floor drain under three compartment sink

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Ventilation and Hood Systems

• Heating, Ventilation, Air Conditioning System Vents

- Instructed PIC to clean and sanitize the indoor ventilation system and to replace filters as necessary to prevent it from becoming a source of contamination of food and food contact surfaces in the surrounding area.

Observed interior intake and exhaust air ducts with debris buildup. Location: Kitchen area by stove

Violation: Personal Cleanliness

• Effectiveness-Hair Restraints

- Hair can be both a direct and indirect vehicle of contamination. Food employees may contaminate their hands when they touch their hair. A hair restraint keeps dislodged hair from ending up in the food and may deter employees from touching their hair. Food employees must wear hair restraints such as hats, hair coverings or nets, beard restraints, and clothing that covers body hair, that are designed and worn to effectively keep their hair from contacting exposed food; clean equipment, utensils, and linens; and unwrapped single-service and single-use articles. Instructed PIC to retrain food employees on proper hair restraints.

Observed a food employee without proper hair restraints. Location: Kitchen area Activity: Actively working with food items

Violation: Storage

• In-Use Utensils, Between-Use Storage

- During pauses in food preparation or dispensing, food preparation and dispensing utensils shall be stored: (A) In the food with their handles above the top of the food and the container; (B) In food that is not time/temperature control for safety food with their handles above the top of the food within containers or equipment that can be closed, such as bins of sugar, flour, or cinnamon; (C) On a clean portion of the food preparation table or cooking equipment only if the in-use utensil and the food-contact surface of the food preparation table or cooking equipment are cleaned and sanitized at a frequency specified under 4-602.11 and 4-702.11; (D) In running water of sufficient velocity to flush particulates to the drain, if used with moist food such as ice cream or mashed potatoes; (E) In a clean, protected location if the utensils, such as ice scoops, are used only with a food that is not time/temperature control for safety food; or (F) In a container of water if the water is maintained at a temperature of at least 57oC (135oF) and the container is cleaned at a frequency specified under Subparagraph 4-602.11(D)(7). Educated and informed PIC on how to properly store utensils.

Observed utensils during a pause in use stored incorrectly. Utensil was stored in food with their handle not above the top of the food and the container. Utensil Type: Scoops Location: Dry food bins Condition of the Location: scoop stored in food bin with handle directly touching the food product

• Equipment, Utensils, Linens and Single-Service and Single-Use Articles Storing

- Clean equipment and multiuse utensils which have been cleaned and sanitized, laundered linens, and single-service and single-use articles can become contaminated before their intended use in a variety of ways such as through water leakage, pest infestation, or other insanitary condition. Clean equipment, utensils, linens, and single-service and single-use articles must be stored in a clean, dry location, protected from contamination, and at least six (6) inches above the floor. Equipment and utensils must be stored so that they are in a self-draining and inverted position or are covered. Single-service and single-use articles should be kept in the original packaging until use. Instructed PIC to store items so that the risk of contamination prior to use is minimized.

Observed cleaned equipment stored improperly. Equipment was not stored six (6) inches above the floor. Equipment Type: Food service pans Storage Method: Stored directly on the floor Location: Under prep tables

Violation: Surface Not Clean

• **Nonfood Contact Surfaces - Cleaning Frequency**

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located Hood filter vents The condition of the surface was debris buildup

Violation: Physical Facilities, Construction and Repair

• **Repairing-Premises, Structures, Attachments, and Fixtures-Methods**

- Poor repair and maintenance compromise the functionality of the physical facilities. This requirement is intended to ensure that the physical facilities are properly maintained in order to serve their intended purpose. Instructed PIC to contact repair personnel to have area of concern repaired so that it is able to serve their intended purpose properly.

Observed the following areas of the facility in disrepair. Observed wall next to handwashing sink in disrepair by holes in wall next to paper towel dispenser

Violation: Records

• **Temperature Logs**

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: All TCS food items Activity of the Food: stored

Long Cao LLC DBA Dragon Sushi - 6904 MENAUL BLVD NE, STE D - Unsatisfactory Re-Inspection required

Long Cao LLC DBA Dragon Sushi - 6904 MENAUL BLVD NE, STE D

Food Establishment Class D

Date: 07/23/2026 - #: CAC-Food-070324-2026 - Inspection Result: Unsatisfactory Re-Inspection required

Facility was opened under an Unsatisfactory. Minimal roach activity 3 live roaches.

Long Cao LLC DBA Dragon Sushi - 6904 MENAUL BLVD NE, STE D

Food Establishment Class D

Date: 07/20/2026 - #: CAC-Food-068427-2026 - Inspection Result: Closure Re-Inspection required

Facility remains closed due to severe cockroach infestation.

Food Establishments shall hire a professional pest control applicator licensed through the New Mexico Department of Agriculture to treat any Infestation. Instructed PIC to hire a pest control company to treat the active infestation and to provide their pest control records to EHD prior to requesting reinspection.

- Time/Temperature Control for Safety Food, Cold Holding

PIC now understands to leave cold holding unit display units on to ensure cold holding unit is able to cold hold at 41 °F.

- Sanitizers, Criteria-Chemicals

PIC explained chlorine sanitizer held at 100 parts per million and will require checks with chlorine test strips.

- Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition

All food items with no date marking were disposed of. Additionally PIC stated will retrain employees on date marking.

- Designation-Dressing Areas and Lockers PIC has a designated spot for employees to store drinks.

- Food Storage Containers Identified with Common Name of Food PIC has labeled all uneasily recognizable food items.

- Using a Handwashing Sink-Operation and Maintenance PIC removed all items stored in hand washing sink basin.

- Outer Openings, Protected PIC has garage doors closed.

- System Maintained in Good Repair PIC repaired leak at three compartment sink faucet.

- Packaged and Unpackaged Food-Separation, Packaging, and Segregation, Cross Contamination

PIC has moved raw meats in designated area below ready to eat foods.

MCDONALDS 10858 - 12601 MONTGOMERY BLVD NE - Approved

MCDONALDS 10858 - 12601 MONTGOMERY BLVD NE

Food Establishment Class C

Date: 07/24/2026 - #: PT0156028 - Inspection Result: Approved

Violation: Pest Control

• **Insect Control Devices, Design and Installation**

- Exposed food and food-contact surfaces must be protected from contamination by insects or insect parts. Installation of the device over food preparation areas or in close proximity to exposed food and/or food-contact surfaces could allow dead insects and/or insect parts to be impelled by the electric charge, fall, or be blown from the device onto food or food-contact surfaces. Instructed PIC to ensure that insect control devices do not cause more contamination than they prevent by placing them away from food and the equipment and utensils used for food and ensuring that they are constructed in a way that contains insects and their parts

Observed an insect control device installed in a way that does not prevent insects or insect fragments from contaminating food or clean equipment, utensils, linens, or single-service and single-use articles. Location: ware washing area Type of Device: electrocution Contamination: Installed directly over Three

compartment sink

Violation: Designated Areas

- **Designated Areas-Employee Accommodations for eating/drinking/smoking**

- Personal belongings can contaminate food, food equipment, and food-contact surfaces. Proper storage facilities are required for articles such as purses, coats, shoes, and personal medications. Instructed PIC to create an area designated for personal belongings in which food, food equipment and utensils, clean linens, and single-service and single-use articles are not be in jeopardy of contamination from these areas.

Observed facility did not provide lockers or other suitable facilities for storage of employees clothing or other personal belongings. Employees keys stored on prep table and soda bib box

Violation: Personal Cleanliness

- **Effectiveness-Hair Restraints**

- Hair can be both a direct and indirect vehicle of contamination. Food employees may contaminate their hands when they touch their hair. A hair restraint keeps dislodged hair from ending up in the food and may deter employees from touching their hair. Food employees must wear hair restraints such as hats, hair coverings or nets, beard restraints, and clothing that covers body hair, that are designed and worn to effectively keep their hair from contacting exposed food; clean equipment, utensils, and linens; and unwrapped single-service and single-use articles. Instructed PIC to retrain food employees on proper hair restraints.

Observed a food employee without proper hair restraints. Location: Kitchen area Activity: Actively working with open food items

Violation: Surface Not Clean

- **Nonfood Contact Surfaces - Cleaning Frequency**

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located Hood vents. The condition of the surface was grease buildup

Mi Taco Su Taco - 4720 ALEXANDER BLVD NE - Approved

Mi Taco Su Taco - 4720 ALEXANDER BLVD NE

MILLYS RESTAURANT - 7308 JEFFERSON ST NE - Approved

MILLYS RESTAURANT - 7308 JEFFERSON ST NE

Food Establishment Class C

Date: 07/21/2026 - #: PT0043887 - Inspection Result: Approved

Violation: Maintenance and Operation

- **Good Repair and Proper Adjustment-Equipment**

- Proper maintenance of equipment to manufacturer specifications helps ensure that it will continue to operate as designed. Failure to properly maintain equipment could lead to violations that place the health of the consumer at risk. Equipment and its components shall be maintained in a state of repair Instructed PIC to repair or replace equipment or components. PIC stated that they have ordered replacements. Instructed PIC to provide updates on gasket replacements.

Observed equipment not maintained in good repair. Location: North east corner of food preparation area. Type of Equipment: Walk in cooler door gasket. Condition of the equipment: Observed cracks and missing pieces of the gasket at the time of inspection.

Violation: Plumbing

- **System Maintained in Good Repair**

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions. Instructed PIC to contact repair personnel to have leaks repaired. PIC must provide copy of completed work order/invoice to CHPD when repairs are completed.

Observed toilet and urinal in men's restroom not maintained in good repair or is not repaired by law. Observed the toilet and urinal found in disrepair by Toilet: leaking water from bottom of the tank. Urinal: leaking water on the bottom of the body/bowl when flushed.

Violation: Personal Cleanliness

- **Effectiveness-Hair Restraints**

- Hair can be both a direct and indirect vehicle of contamination. Food employees may contaminate their hands when they touch their hair. A hair restraint keeps dislodged hair from ending up in the food and may deter employees from touching their hair. Food employees must wear hair restraints such as hats, hair coverings or nets, beard restraints, and clothing that covers body hair, that are designed and worn to effectively keep their hair from contacting exposed food; clean equipment, utensils, and linens; and unwrapped single-service and single-use articles. Instructed PIC to retrain food employees on proper hair restraints. PIC obtained beard/facial hair restraints for employees.

Observed a food employees without proper facial hair restraints. Location: Kitchen line. Activity: preparing food items such as pancakes, eggs, corned beef and hash.

NA-TEAVO - 10000 COORS BLVD NW - Conditional Approved

NA-TEAVO - 10000 COORS BLVD NW

Food Establishment Class C

Date: 07/21/2026 - #: RT-FOODEST-066247-2025 - Inspection Result: Conditional Approved

Violation: Operation and Maintenance

• Hand Drying Provision

- Hand drying provisions must be provided for hand drying so that employees will not dry their hands on their clothing or other unclean materials which could re-contaminate hands. Each handwashing sink or group of 2 adjacent handwashing sinks shall be provided with: (A) individual, disposable towels (B) a continuous towel system that supplies the user with a clean towel (C) a heater-air hand drying device or (D) a hand drying device that employs an air-knife system that delivers high velocity, pressurized air at ambient temperatures. Instructed PIC to provide and ensure that hand drying provisions are available for each handwashing sink.

Observed no approved method of hand drying at handwashing sink(s). Location: Both hand wash stations.

Violation: Warewashing Temperature and Concentration

• Sanitizers, Criteria-Chemicals

- Chemical sanitizers may be toxic if not used in accordance with requirements listed in the Code of Federal Regulations (CFR). Large concentrations of sanitizer in excess of the CFR requirements can be harmful because residues of the materials remain. Instructed PIC that sanitizer concentration levels must be within manufacturers guidelines and the CFR. PIC corrected violation by - dilution of 50 ppm chlorine at 78 °F.

Observed chemical sanitizer concentration exceeding the maximum level permitted. Type of Sanitizer: Chlorine sanitizer. Location: Wiping cloth container.
Concentration: Concentration tested at 200 ppm.

Violation: Functionality and Accuracy

• Temperature Measuring Devices, Food-Accuracy

- Due to the lack of a large safety margin in the temperature requirements themselves, thermometer accuracy is imperative for the safety of food. Instructed PIC to calibrate food thermometers or to acquire new thermometers to ensure that the proper accuracy has been achieved to be within two (2) degree F.

Observed food temperature measuring device that is scaled only in Fahrenheit failing to meet accuracy requirements. Location: Two stem thermometers
Type: probe thermometers.
Accuracy: not calibrated.

Violation: Operations

• Valid Permit

- General Instructed the PIC that no person is allowed to operate a Food Establishment in the City without a valid permit to operate issued by the Enforcement Authority for that Food Establishment. Provided a 5-Day notice of nonpayment and the outstanding invoice(s) that must be paid to receive a valid permit.

Observed that the facility was operating with an expired permit as of 11/30/2025

Violation: Hot & Cold-Water Availability & Pressure

• Water Capacity-Quantity and Availability

- Hot water required for washing items such as equipment and utensils and employees' hands, must be available in sufficient quantities to meet demand during peak water usage periods.

Observed facility with insufficient hot water. Location: Service area hand wash station. Hot water valve shut off due to leaking.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on floor counters, drains, equipment, sinks and around grease trap and water heaters and storage shelving. and to clean and sanitize areas noted.

Observed buildup and debris on the floor counters, drains, equipment, sinks and around grease trap and water heaters and storage shelving.

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean n, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located Front counter storage, top of grease trap and water heater. The surface was made out of Formica, heater and grease trap are metal. The condition of the surface was soiled with debris and caked on buildup.

Panda Express - 261 98th ST NW - Approved

Panda Express - 261 98th ST NW

Food Establishment Class C

Date: 07/22/2026 - #: RT-FOODEST-007908-2025 - Inspection Result: Approved

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: clear container with sugar inside Location: back prep area

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items. No food logs for hot holding or cold holding foods inspector gave pic cold holding and hot holding logs at time of the inspection

PANDA EXPRESS INC - 2040 GIBSON BLVD SE - Approved

PANDA EXPRESS INC - 2040 GIBSON BLVD SE

Food Establishment Class C

PANERA BREAD #610055 - 3550 NM-528 - Approved

PANERA BREAD #610055 - 3550 NM-528

Food Establishment Class C

Date: 07/22/2026 - #: RT-FOODEST-066013-2026 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours. Instructed PIC to cease

Observed utensil food-contact surface with the buildup of soil residues. Utensil Type: Ice machine. Location: Ware washing machine area, Condition of the Location: interior of the ice machine ceiling with a black like soil residue and condensation dripping onto the ice.

Violation: Pest Control

• Removing Dead or Trapped Birds, Insects, Rodents and other Pest

- Dead or trapped birds, insects, rodents, and other pests shall be removed from control devices and the premises at a frequency that prevents their accumulation, decomposition, or the attraction of pests. Instructed PIC that the dead insects accumulating on the floor should be removed, cleaned and sanitized

Observed some pests allowed to accumulate on the floor. Location: mop sink area, and bakery area
Pest Type: cockroach Pest Condition: dead

Violation: Maintenance and Operation

• Good Repair and Proper Adjustment-Equipment

- Proper maintenance of equipment to manufacturer specifications helps ensure that it will continue to operate as designed. Failure to properly maintain equipment could lead to violations that place the health of the consumer at risk. Equipment and its components shall be maintained in a state of repair Nonfood-contact surfaces of equipment routinely exposed to splash or food debris are required to be constructed of nonabsorbent materials to facilitate cleaning. Equipment that is easily cleaned minimizes the presence of pathogenic organisms, moisture, and debris and deters the attraction of rodents and insects. Instructed PIC to repair or replace equipment or components and to replace the surface with a material that is smooth, absorbent and corrosion resistant.

Observed equipment not maintained in good repair and that surface that was not smooth, corrosion resistant and non-absorbent. The surface was located in the beverage service area and bakery area The surface was made out of damaged, in poor repair wood composite style material The condition of the surface was in poor repair with exposed materials, in the bakery area the shelving was being used as a cutting board.

Violation: Receptacle Condition

• Covering Receptacles

- Waste bins with food residue must have tight fitting lids or doors and be emptied once they are filled. Instructed PIC to ensure that waste bins are kept sanitary

by installing and maintaining closed tight-fitting lids and emptying the bins once they are filled.

Observed waste bins outside the food establishment with lids open and not being utilized.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on floors, and walls throughout the facility and to clean and sanitize.

Observed buildup and debris on the walls and floors throughout the kitchen, warewashing area, prep area.

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located throughout the facility in prep area, kitchen line, drive through etc. on areas such as sides of equipment, shelving, cabinets etc. The condition of the surface had significant debris accumulation

Violation: Physical Facilities, Construction and Repair

• Repairing-Premises, Structures, Attachments, and Fixtures-Methods

- Poor repair and maintenance compromise the functionality of the physical facilities. This requirement is intended to ensure that the physical facilities are properly maintained in order to serve their intended purpose. Instructed PIC to contact repair personnel to have area of concern repaired so that it is able to serve their intended purpose properly.

Observed the following areas of the facility in disrepair. Observed walls in disrepair by having numerous holes above the compartments sink.

PIZZA 9 - 4720 ALEXANDER A-5 NE - Approved

PIZZA 9 - 4720 ALEXANDER A-5 NE

Food Establishment Class C

Date: 07/23/2026 - #: PT0155932 - Inspection Result: Approved

Violation: Testing Devices

• Sanitizing Solutions, Testing Devices

- Testing devices to measure the concentration of sanitizing solutions are required for 2 reasons: 1. The use of chemical sanitizers requires minimum concentrations of the sanitizer to ensure sanitization; and 2. Too much sanitizer could be toxic. Verified facility is utilizing the correct concentration level of sanitizer in the facility. Instructed PIC to acquire unexpired chlorine and quat sanitizing solution testing kits or device.

Observed expired quat and chlorine testing kits facility used to measure the concentration of chemical sanitizing solution at the time of inspection.

SHARK ENTERPRISES INC DBA Bob's Burgers - 6628 CAMINITO COORS NW

Food Establishment Class C

Date: 07/23/2026 - #: RT-FOODEST-003464-2026 - Inspection Result: Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment ice machine. Location: cook and prep area.

Condition of the Location: Ice machine interior top with a Black, Pink, brown buildup on the top of the ice machine near the chute with condensation dripping at the time of inspection.

Observed food cutting equipment in storage not cleaned properly with dry food debris on a vegetable cutting equipment.

Violation: Hot Holding & Reheating

• **Reheating for Hot Holding**

- Time/temperature control for safety food that is cooked, cooled, and reheated for hot holding shall be reheated so that all parts of the food reach a temperature of at least 165°F for 15 seconds. Instructed PIC to reheat food to 165°F for 15 seconds prior to retaining it in hot holding and to retrain food employees on the proper method of reheating food.

Observed time/temperature control for safety food not reheated to required temperature within 2 hours. Food Item: Green chili sauce.

Food Temperature: 121 °F.

Green chili sauce was placed in the stemmer prior to reheating to 165 f.

Violation: Storage

• **Equipment and Utensils, Air-Drying Required**

- Food, clean equipment and multiuse utensils which have been cleaned and sanitized, laundered linens, and single-service and single-use articles can become contaminated before their intended use in a variety of ways such as through water leakage, pest infestation, or other insanitary condition. Food, clean equipment, utensils, linens, and single-service and single-use articles must be stored in a clean, dry location, and protected from contamination. Instructed PIC to store items so that the risk of contamination prior to use is minimized.

Observed spatulas and spoons stored improperly; items stored in under a source of contamination by being stored in a rusty pan.

Violation: Surface Not Clean

• **Nonfood Contact Surfaces - Cleaning Frequency**

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface

Observed nonfood contact surface with the buildup of soil residues. The surface was located cooking areas. The surface was made out of Stainless steel.

The condition of the refrigerator bottom with debris and grease buildup bottom area. Observed fab above prep top cooler with soil buildup at the time of inspection.

Violation: Physical Facilities, Construction and Repair

• **Floor and Wall Junctions, Coved, and Enclosed or Sealed**

- Wall and ceiling covering materials shall be attached so that they are EASILY CLEANABLE. Instructed person in charge to replace or clean and sanitize so that it is maintained or is easily cleanable.

Observed Walls, base coving is not easily cleanable. The surface was made out of Quarry tile and FRP walls. walls by the back hand wash station are bubbling out and base coving coming loose against the wall in same area and under three compartments sink.

ST JOHNS UNITED METHODIST CHURCH - 2626 ARIZONA ST NE - Approved

STICKY RICE - 7600 JEFFERSON ST NE, 5

Food Establishment Class C

Date: 07/21/2026 - #: CAC-Food-068974-2026 - Inspection Result: Approved

Corrective action taken during the routine inspection resulted in the facility being upgraded from a Conditional Approved Status to Approved Status. The person in charge was able to promptly address and correct one of the violations noted in the original inspection report while on site. The following priority foundation violation was corrected on site:

- Thawing Method. Observed PIC turn on cold running water over thawing raw chicken during inspection.

STICKY RICE - 7600 JEFFERSON ST NE, 5

Food Establishment Class C

Date: 07/21/2026 - #: PT0142579 - Inspection Result: Conditional Approved

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch**

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours. Instructed PIC to remove ice, debris and buildup in ice machine and to clean and sanitize interior surface of ice machine.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Ice machine. Location: interior surfaces. Condition of the Location: observed debris and buildup in the ice machine at the time of inspection.

Violation: Thawing

• **Thawing Method**

- Freezing prevents microbial growth in foods, but usually does not destroy all microorganisms. Improper thawing provides an opportunity for surviving bacteria to grow to harmful numbers and/or produce toxins. Food must be thawed in an approved method such as: A. under refrigeration maintaining food below forty-one (41) °F or below, B. submerged under running water at seventy (70) °F, or below with sufficient velocity to agitate and float off loose particles in the overflow, if ready-to-eat does not go above forty-one (41) °F, or if raw does not exceed forty-one (41) °F for four (4) hours including the cooking or re-cooling process C. in a microwave oven only when the food will be immediately transferred to conventional cooking facilities as part of a continuous cooking process, or when the entire, uninterrupted cooking process takes place in the microwave oven D. as part of the cooking process E. prepared for immediate service in response to an individual consumer's order Instructed PIC to retrain food employees on thawing food and PIC corrected violation by turning on cold running water over thawing raw chicken.

Observed frozen time/temperature control for safety food improperly thawing. Food: Raw chicken Location: three compartment sink. Condition: frozen to touch. Method: observed raw chicken in standing water inside three compartment basins without cold running water turned on.

Violation: Training Records

• Certified Food Protection Manager

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

• Food Handler Cards

- Food Employees shall demonstrate their knowledge of safe Food handling practices through passing a test from a Food Handler Training Program, Approved by the Enforcement Authority, and possess a Valid Food Handler Card within thirty (30) days of employment in a Food Establishment unless the Food Employee is a Certified Food Protection Manager; the Food Employee does not prepare or handle TCS Food, provided that at a minimum, the Permit Holder assures the Food Employee complies with Part 16 of these rules; or The Food Employee is working as a Food Employee or volunteer of a Temporary Food Establishment or Charitable Food Provider, provided that at minimum, the Person In Charge is a Certified Food Protection Manager or has a Valid Food Handler Card. Instructed PIC to ensure that all food employees are properly trained in safe food handling practices.

Observed that food employees were not in possession of a food handler card or had been trained in another approved food safety course.

Violation: Lighting

• Intensity-Lighting

- Instructed PIC to contact repair personnel to replace or repair lighting to permit the conducting of operations safely, and thorough cleaning.

Observed inadequate amount of lighting. Location: Dry storage area Manner: observed two light bulbs burnt out on light fixture.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris and to clean and sanitize floor areas.

Observed buildup and debris in the following areas:

1. on the floor underneath equipment and three compartment sink
2. on the floor underneath register countertop and front register area.

Violation: Physical Facilities, Construction and Repair

• Floors, Walls and Ceilings-Cleanability

- Floors, floor coverings, walls, wall coverings, and ceilings shall be designed, constructed, maintained and/or installed from materials so that they are SMOOTH and EASILY CLEANABLE. Instructed person in charge to repair floor area and missing tile section so that it is smooth and easily cleanable.

Observed floor is not smooth and easily cleanable. Location: dry storage area. Condition: observed a section of tile is missing from floor area.

STUFFED LUST SOPAPILLA COMPANY - 6320 ZUNI RD SE - Approved

STUFFED LUST SOPAPILLA COMPANY - 6320 ZUNI RD SE

Mobile Food Unit Class C

Date: 07/23/2026 - #: RT-MBFOOD-068220-2026 - Inspection Result: Approved

SURESTAY HOTEL - 1635 CANDELARIA NE - Approved

SURESTAY HOTEL - 1635 CANDELARIA NE

Food Establishment Class B

Date: 07/22/2026 - #: CAC-Food-069727-2026 - Inspection Result: Approved

Facility is being upgraded from a Conditional Approved status to an Approved status. PIC has corrected one (1) Priority violation and one (1) Priority Foundation violation bringing score back into an Approved status.

Violations corrected:

1. Records: Temperature Logs (PF)
2. Date Marking and Disposition: Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition

SURESTAY HOTEL - 1635 CANDELARIA NE**Food Establishment Class B****Date: 07/20/2026 - #: PT0150817 - Inspection Result: Conditional Approved****Violation: Date Marking and Disposition****• Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition**

- Ready-to-eat, time/temperature control for safety food prepared in a food establishment and held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24-hour period inside the facility. PIC voluntarily discarded food items bearing no date markings.

Observed ready-to-eat time and temperature controlled for safety food prepared and held within the establishment with no date marking indicators. Location: Kitchen. Upright cooler

Food Items: Chopped green chile Expiration Dates: No dates available

Violation: Training Records**• Certified Food Protection Manager**

- All Food Establishments shall have at least one Certified Food Protection Manager. Instructed PIC that the permit holder must designate an employee to be certified as a food protection manager. The facility must provide a certificate to EHD to have on file.

Observed that the food establishment does not have a certified food protection manager on staff.

Violation: Operation and Maintenance**• Using a Handwashing Sink-Operation and Maintenance**

- Facilities must be maintained in a condition that promotes handwashing and restricted for that use. Convenient accessibility of a handwashing facility encourages timely handwashing which provides a break in the chain of contamination from the hands of food employees to food or food-contact surfaces. Handwashing sinks shall be maintained so that they are accessible at all time for employee use. Instructed PIC to make handwashing sink accessible and to retrain employees on ensuring handwashing sinks are properly maintained.

Observed handwashing sink(s) was observed blocked or inaccessible. Location: Hand wash station near three compartment sink Manner: Blocked by trash can

Violation: Records**• Temperature Logs**

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: Hot and cold logs unavailable
Activity of the Food: Stored and cooled

• Calibration Logs

- Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment

Observed the food establishment does not have calibration logs for temperature measuring devices.

SUSHI AND SAKE LLC - 4214 CENTRAL AVE SE - Conditional Approved**SUSHI AND SAKE LLC - 4214 CENTRAL AVE SE****Food Establishment Class D****Date: 07/24/2026 - #: PT0155373 - Inspection Result: Conditional Approved****Violation: Equipment, Food Contact Surfaces, and Utensils Clean****• Manual and Mechanical Warewashing Equipment, Chemical Sanitization-Temperature, pH, Concentration and Hardness**

- The effectiveness of chemical sanitizers can be directly affected various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions, and shall be used within designated parameters. Instructed PIC that for chlorine sanitizer at a concentration range of 50-99ppm must also be at a minimum temperature of 75F with a contact time of 7 seconds.

Observed chlorine solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization. Location: Dishwashing machine
Concentration: 25 PPM

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Produce peelers, strainers, ice machine, pitchers Location: Clean dish storage racks

Condition of the Location: Soiled with food debris and residue

Violation: Plumbing

- **System Maintained in Good Repair**

- Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment, utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

Observed 3 compartment sink faucet and spray nozzle is not maintained in good repair or is not repaired by law. Observed 3 compartment sink faucet and spray nozzle to be found in disrepair by having a leak that needs to be repaired and spray nozzle must be properly attached.

Violation: Personal Cleanliness

- **Effectiveness-Hair Restraints**

- Hair can be both a direct and indirect vehicle of contamination. Food employees may contaminate their hands when they touch their hair. A hair restraint keeps dislodged hair from ending up in the food and may deter employees from touching their hair. Food employees must wear hair restraints such as hats, hair coverings or nets, beard restraints, and clothing that covers body hair, that are designed and worn to effectively keep their hair from contacting exposed food; clean equipment, utensils, and linens; and unwrapped single-service and single-use articles. Instructed PIC to retrain food employees on proper hair restraints.

Observed a food employee without proper hair restraints. Location: Kitchen make line
Activity: Active food handling around open food

Violation: Physical Facilities, Cleaning

- **Cleaning, Frequency and Restrictions**

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on kitchen floors/walls/drains throughout facility and to clean and sanitize on a regular basis.

Observed buildup and debris on the kitchen floors/walls/drains throughout facility.

Violation: Records

- **Temperature Logs**

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not have temperature logs available for TCS foods items. Food Items: All cold and hot held temperature-controlled foods
Activity of the Food: Stored, thawed, cooled

SV HOTELS LLC DBA Sandia Peak Inn- 4614 CENTRAL AVE SW - Approved

SV HOTELS LLC DBA Sandia Peak Inn – 4614 CENTRAL AVE SW

Retail Food Establishment Class 3

Date: 07/22/2026 - #: RT-RET-069596-2026 – Inspection Result: Approved

Violation: Surface Not Clean

- **Nonfood Contact Surfaces – Cleaning Frequency**

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located in dining area The condition of the surface was had debris buildup on the countertops

Violation: Plumbing

- **Backflow Prevention, Air Gap**

- During periods of extraordinary demand, drinking water systems may develop negative pressure in portions of the system. If a connection exists between the system and a source of contaminated water during times of negative pressure, contaminated water may be drawn into and foul the entire system. Standing water in sinks, dipper wells, steam kettles, and other equipment may become contaminated with cleaning chemicals or food residue. To prevent the introduction of this liquid into the water supply through back siphonage, various means may be used. The water outlet of a drinking water system must not be installed so that it contacts water in sinks, equipment, or other fixtures that use water. Providing an air gap between the water supply outlet and the flood level rim of a plumbing fixture or equipment prevents contamination that may be caused by backflow. Instructed PIC to contact repair personnel to have an air gap established to prevent backflow.

Observed an inadequate air gap ice machine pipe being vented directly inside drain an air gap is needed.

Violation: Operations

- **Valid Permit**

- Instructed the PIC that no person is allowed to operate a Food Establishment in the City without a valid permit to operate issued by the Enforcement Authority for that Food Establishment. Provided a 5-Day notice of nonpayment and the outstanding invoice(s) that must be paid to receive a valid permit.

Observed that the facility was operating with an expired permit.

Violation: Operation and Maintenance

• **Hand Drying Provision**

- Hand drying provisions must be provided for hand drying so that employees will not dry their hands on their clothing or other unclean materials which could re-contaminate hands. Each handwashing sink or group of 2 adjacent handwashing sinks shall be provided with: (A) individual, disposable towels (B) a continuous towel system that supplies the user with a clean towel (C) a heater-air hand drying device or (D) a hand drying device that employs an air-knife system that delivers high velocity, pressurized air at ambient temperatures. Instructed PIC to provide and ensure that hand drying provisions are available for each handwashing sink.

Observed no approved method of hand drying at handwashing sink(s). Location: dining area

SW CONVENIENCE STORES LLC – DK #707 – 10324 MENAUL BLVD NE

Retail Food Establishment Class 3

Date: 07/21/2026 - #: CAC-Food-068897-2026 – Inspection Result: Approved

Manual and Mechanical Warewashing Equipment, Chemical Sanitization Temperature, pH, Concentration and Hardness- PIC corrected violation on site by remaking sanitizer solution

SW CONVENIENCE STORES LLC – DK #707 – 10324 MENAUL BLVD NE

Retail Food Establishment Class 3

Date: 07/21/2026 - #: PT0045179 – Inspection Result: Conditional Approved

Violation: Surface Not Clean

• **Nonfood Contact Surfaces – Cleaning Frequency**

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located inside the cabinets under the soda and coffee machines. The condition of the surface was debris buildup.

Violation: Physical Facilities

• **Outer Openings, Protected**

- Walls and roofs provide a barrier to protect the interior and foods from the weather, windblown dirt and debris, and flying insects. Perimeter walls and roofs of a food establishment shall effectively protect the establishment from the weather and the entry of insects, rodents, and other animals.

Observed doors to the outside that are not tight fitting, light can be seen at the edges. Back door bottom left side light can be seen coming in.

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Manual and Mechanical Warewashing Equipment, Chemical Sanitization-Temperature, pH, Concentration and Hardness**

- The effectiveness of chemical sanitizers can be directly affected by various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions, and shall be used within designated parameters. Instructed PIC that for quaternary ammonium compound solution at a concentration range of allowed by the manufacturer must also be at a minimum temperature of 75°F with a contact time of 30 seconds. PIC corrected violation by Remaking sanitizer solution.

Observed quaternary ammonium compound solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization. Location: Wiping cloth bucket by sink Concentration: 0ppm

Violation: Operation and Maintenance

• **Using a Handwashing Sink-Operation and Maintenance**

- Facilities must be maintained in a condition that promotes handwashing and restricted for that use. Convenient accessibility of a handwashing facility encourages timely handwashing which provides a break in the chain of contamination from the hands of food employees to food or food-contact surfaces. Handwashing sinks shall be maintained so that they are accessible at all time for employee use. Instructed PIC to make handwashing sink accessible and to retrain employees on ensuring handwashing sinks are properly maintained.

Observed handwashing sink(s) was observed blocked or inaccessible. Location: Back room of facility Manner: food service container full of water in basin of handwashing sink at time of inspection

Violation: Poisonous and Toxic/Chemical Substances

• **Common Name-Working Containers**

- When toxic or poisonous substances are purchased in bulk, it is common practice to divide the contents into working containers for use around the establishment. When working containers are not labeled, a risk of misuses or food contamination is created. Working containers used for storing poisonous or toxic materials such as cleaners and sanitizers taken from bulk supplies shall be clearly and individually identified with the common name of the material. Instructed PIC that the unlabeled containers and their contents must not be used in the operation of the food establishment unless it can be shown that there is an internal system where the contents are known and the containers can be labeled properly.

Observed working containers used for storing poisonous or toxic materials taken from bulk supplies not properly labeled or identified. Container Type: Spray bottle Alleged Material: Unknown

Violation: Date Marking and Disposition

• **Ready-To-Eat Time/Temperature Control for Safety Food, Date Marking and Disposition**

- Ready-to-eat, time/temperature control for safety food held longer than a 24-hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days. Instructed PIC to retrain food employees on

ensuring the proper disposition of food items. PIC voluntarily discarded food items past date

Observed ready-to-eat time and temperature controlled for safety food held within the establishment exceeding the seven (7) day limit. Location: Display cooler
Food Items: Shamrock Milk Expiration Dates: 6/18/2026, 6/27/2026. 5/30/3036

• **Retail Food Stock First in First out**

- Retail Food stock shall be properly rotated with the first in, first out method. Instructed PIC to re-stock the retail shelf so that the first in first out method is used and to retrain staff on proper stocking procedures.

Observed retail food shelves with stock not rotated in the first in first out method. Food with later expiration dates was observed in front of food with more recent expiration dates.

Location: store shelves

Food Items: Chips, Cereal, Milk, and Chicken Salad

Expiration Dates: Cheerios First 30MAY2026- Then 20NOV2025 Chicken salad – First 11/26 Then 8/26

Milk First 8/12/2026 then 6/27/2026 then 5/30/2026

Taco Cabana – 6500 SAN MATEO BLVD NE – Approved

Taco Cabana – 6500 SAN MATEO BLVD NE

Food Establishment Class C

Date: 07/23/2026 - #: PT0045636 – Inspection Result: Approved

Violation: Food Separation

• **Packaged and Unpackaged Food-Separation, Packaging, and Segregation, Cross Contamination**

- Food must be protected from contamination by storing the food in packages, covered containers, or wrappings. Instructed PIC to ensure that all food is covered during storage and to train employees on proper food storage procedures.

Observed food not protected from contamination during storage by not being covered in a container, package, or wrapping. Location: walk in cooler on top of covered food item. Food Item: uncovered pan of green sauce that spilled onto pan of food underneath.

Violation: Hands Clean & Properly Washed

• **When to Wash**

- Food employees must clean their hands and exposed arms before food preparation, including working with exposed food, clean equipment, and unwrapped items. This includes after touching bare human body parts, using the toilet room, caring for service and aquatic animals, coughing, sneezing, using tobacco products, eating, drinking, handling soiled equipment or utensils, removing soil and contamination during food preparation, switching between raw and ready-to-eat food, and donning gloves. Employees must wash their hands after any activity which may result in contamination of the hands.

Instructed food employee to wash and sanitize hands, and PIC to retrain employees on when handwashing is required.

At the time of inspection, observed food employee not wash hands when required. Condition: observed employee discontinue working with dough, then proceed to turn on water for small three compartment sink. Employee then began wiping water from sink ledge of smaller three compartment sink, then proceed to dry hands with apron and a paper towel. Employee then proceeded to return to work with dough tray.

Violation: Physical Facilities, Cleaning

• **Cleaning, Frequency and Restrictions**

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris and to clean and sanitize floor drains and floor. Also instructed PIC to retrain employees to keep floor as dry as possible.

Observed buildup, standing water and debris in the following areas:

1. on the floor throughout food preparation and food storage areas.
2. in the floor drain strainer at the time of inspection.

Violation: Consumer Advisories

• **Allergen Warning, Unpackaged Food**

- Unintended food allergen food allergen exposures pose a serious risk to consumers with food allergies. Consumers with food allergies depend on allergen information, written notification of the presence of major food allergens as an ingredient in unpackaged foods that are served or sold by the food establishment must be provided. Written notification can be provided in many forms such as: physical or electronic means, including, but not limited to, brochures, deli case or menu notifications, label statements, table tents, placards, or other effective written means. Notifying the consumer to the presence of major food allergens may prevent an inadvertent exposure. Instructed PIC to provide written notification of major allergen information for all unpackaged food offered for sale or served to consumers. PIC stated that they will print the consumer advisory out and post it near register area so that it is visible to customers. Instructed PIC to send a photo of posting to CHPD inspector when signage is posted.

Observed no written notification of the presence of major food allergens for unpackaged food served or sold to consumers.

Violation: Physical Facilities, Construction and Repair

• **Floors, Walls and Ceilings-Cleanability**

- Floors, floor coverings, walls, wall coverings, and ceilings shall be designed, constructed, maintained and/or installed from materials so that they are SMOOTH and EASILY CLEANABLE. Instructed person in charge to remove broken tile and replace with material that is smooth and easily cleanable.

Observed floor area is not smooth and easily cleanable. Location: near chest freezer and ice machine. Condition: Broken tile causing standing water to stay on floor.

TEDDY BEAR PRE SCHOOL – 5820 2ND ST NW – Approved

TEDDY BEAR PRE SCHOOL – 5820 2ND ST NW

Food Establishment Class C

Date: 07/22/2026 - #: PT0054666 – Inspection Result: Approved

Violation: Pest Control

• Controlling Pests, Inspection/Harborage

- Insects and other pests are capable of transmitting disease to humans by contaminating food and food-contact surfaces. Effective measures must be taken to eliminate their presence in food establishments. The premises shall be maintained free of insects, rodents, and other pests. The presence of insects, rodents, and other pests shall be controlled to eliminate their presence on the premises by using methods such as trapping devices or other means of pest control. Instructed PIC to remove any dead pests or pest fecal material and to have a professional pest control company set traps and perform treatment as needed. Facility is to provide EHD with appropriate pest control records. Last day they had their pest control visit was 6/30/26 and stated no visible pests.

Observed pests in the facility with no control methods in place. Location: Food storage area.

Pest Type: American roaches.

Pest Condition: 4 dead roaches.

Violation: Physical Facilities

• Outer Openings, Protected

- The presence of insects and rodents is minimized by protecting outer openings to the food establishment. Outer openings of a food establishment shall be protected against the entry of insects and rodents by filling or closing holes and other gaps along floors, walls and ceilings. Instructed PIC to repair the holes/gaps identified to prevent entrance of pests.

Observed doors to the outside that are not tight fitting, light can be seen at the edges. Storage receiving door. Observed corner of walls with a 2-inch hole in the corner of the walls near the receiving door.

Violation: Warewashing Temperature and Concentration

• Sanitizers, Criteria-Chemicals

- Chemical sanitizers may be toxic if not used in accordance with requirements listed in the Code of Federal Regulations (CFR). Large concentrations of sanitizer in excess of the CFR requirements can be harmful because residues of the materials remain. Instructed PIC that sanitizer concentration levels must be within manufacturers guidelines and the CFR. PIC corrected violation by diluting sanitizer with water and brought to 50 ppm chlorine. At 89 degrees.

Observed chemical sanitizer concentration exceeding the maximum level permitted. Type of Sanitizer: Chlorine sanitizer.

Location: Wiping cloth container in the Kitchen. Concentration: tested at 200 ppm chlorine.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on floors of the storage racks, behind kitchen stove and three compartments' sinks. And to clean and sanitize areas noted.

Observed buildup and debris on the floors of the storage racks, behind kitchen stove and three compartments' sinks.

Violation: Storage

• Equipment, Utensils, Linens and Single-Service and Single-Use Articles Storing

- During pauses in food preparation or dispensing, food preparation and dispensing utensils shall be stored: (A) In the food with their handles above the top of the food and the container; (B) In food that is not time/temperature control for safety food with their handles above the top of the food within containers or equipment that can be closed, such as bins of sugar, flour, or cinnamon; (C) On a clean portion of the food preparation table or cooking equipment only if the in-use utensil and the food-contact surface of the food preparation table or cooking equipment are cleaned and sanitized at a frequency specified under 4-602.11 and 4-702.11; (D) In running water of sufficient velocity to flush particulates to the drain, if used with moist food such as ice cream or mashed potatoes; (E) In a clean, protected location if the utensils, such as ice scoops, are used only with a food that is not time/temperature control for safety food; or (F) In a container of water if the water is maintained at a temperature of at least 57°C (135°F) and the container is cleaned at a frequency specified under Subparagraph 4-602.11(D)(7). Educated and informed PIC on how to properly store utensils.

Observed clean single-service and single-use articles stored improperly. Single-service and single-use articles were not stored six (6) inches above the floor. Single-service and single-use articles Type: Plastic service articles. Single-service and single-use articles it was stored on the floor in the storage room.

Violation: Surface Not Clean

• Nonfood Contact Surfaces – Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface

Observed nonfood contact surface with the buildup of soil residues. The surface was located Kitchen.

The surface was made out of wooden hand wash sink cabinet The condition of the surface was rusty and debris buildup.

Violation: Records

• Temperature Logs

- TCS Foods must be kept at safe temperatures at all times and Food Establishments shall maintain adequate temperature logs of TCS Foods while being stored, thawed, cooled, prepared, displayed, dispensed, or transported

Observed that the food establishment does not complete temperature logs for TCS foods items. Food Items: Milk, soups, Chicken, eggs, Beans, mixed veggies, milk, Yogurt.

Activity of the Food: cooked and prepared.

• **Calibration Logs**

- Food Establishments shall calibrate measuring equipment in accordance with the manufacturer recommendations and shall maintain adequate and contemporaneous calibration logs for calibration of equipment

Observed the food establishment does not have calibration logs for temperature measuring devices.

TOWN PLACE SUITES – 2400 CENTRE AVE SE – Approved

TOWN PLACE SUITES – 2400 CENTRE AVE SE

Retail Food Establishment Class 3

Date: 07/21/2026 - #: RT-RET-077025-2025 – Inspection Result: Approved

Violation: Cold Holding

• **Time/Temperature Control for Safety Food, Cold Holding**

- Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.

Observed food items in cold holding unit measuring above 41°F. Location: Retail area

Food Items: Orange juice (76°F), apple juice (76°F), smoothie juice (79°F)

• **Cold Holding Capacities-Equipment**

- The ability of equipment to maintain time/temperature control for safety foods at Code-required temperatures is critical to food safety. Improper holding and cooking temperatures continue to be major contributing factors to foodborne illness. Therefore, it is very important to have adequate cold holding equipment with enough capacity to meet the demands of the operation. Instructed PIC to make repairs necessary to have adequate cold holding equipment or must acquire sufficient equipment to do so.

Observed insufficient cold holding equipment to properly hold food cold. Location: Retail area Condition: Cooler is completely down and not in operation

UPTOWN SAGGIOS – 6600 MENAUL BLVD NE – Approved

UPTOWN SAGGIOS - 6600 MENAUL BLVD NE

Food Establishment Class C

Date: 07/22/2026 - #: PT0156264 - Inspection Result: Approved

Complaint

This inspection was the result of a complaint received by the Department and was unsubstantiated.

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• **Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch**

- Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours.

Observed equipment food-contact surface with the buildup of soil residues. Equipment Type: Slicer and Ice machine Location: Salad area and in dish machine area Condition of the Location: Debris buildup.

Violation: Maintenance and Operation

• **Cutting Surfaces**

- Cutting surfaces such as cutting boards and blocks that become scratched and scored may be difficult to clean and sanitize. As a result, pathogenic microorganisms transmissible through food may buildup or accumulate. These microorganisms may be transferred to foods that are prepared on such surfaces. Instructed PIC to resurface the cutting board, or discard if not capable of being resurfaced.

Observed cutting surface with deep scratches and scoring which limit the ability to be effectively cleaned and sanitized. Location: Main kitchen line Type: cutting board

Violation: Training Records

• **Food Handler Cards**

- Food Employees shall demonstrate their knowledge of safe Food handling practices through passing a test from a Food Handler Training Program, Approved by the Enforcement Authority, and possess a Valid Food Handler Card within thirty (30) days of employment in a Food Establishment unless the Food Employee is a Certified Food Protection Manager; the Food Employee does not prepare or handle TCS Food, provided that at a minimum, the Permit Holder assures the Food Employee complies with Part 16 of these rules; or The Food Employee is working as a Food Employee or volunteer of a Temporary Food Establishment or Charitable Food Provider, provided that at minimum, the Person In Charge is a Certified Food Protection Manager or has a Valid Food Handler Card. Instructed PIC to ensure that all food employees are properly trained in safe food handling practices.

Observed that food employees were not in possession of a food handler card or had been trained in another approved food safety course.

Violation: Ventilation and Hood Systems

• Heating, Ventilation, Air Conditioning System Vents

- Heating, ventilating, and air conditioning systems shall be designed, installed, and maintained so that make-up air intake and exhaust vents do not cause contamination of food, contact surfaces, equipment, or utensils.

Observed heating and air conditioning system vents not properly designed and located to be easily cleanable. Location: Inside main kitchen Manner: Debris buildup

Violation: Designated Areas

• Designated Areas-Employee Accommodations for eating/drinking/smoking

- Personal belongings can contaminate food, food equipment, and food-contact surfaces. Proper storage facilities are required for articles such as purses, coats, shoes, and personal medications. Instructed PIC to create an area designated for personal belongings in which food, food equipment and utensils, clean linens, and single-service and single-use articles are not be in jeopardy of contamination from these areas.

Observed facility did not provide lockers or other suitable facilities for storage of employees clothing or other personal belongings.

• Designation-Dressing Areas and Lockers

- Personal belongings can contaminate food, food equipment, and food-contact surfaces. Proper storage facilities are required for articles such as purses, coats, shoes, and personal medications. Instructed PIC to create an area designated for personal belongings in which food, food equipment and utensils, clean linens, and single-service and single-use articles are not in jeopardy of contamination from these areas.

Observed facility did not provide lockers or other suitable facilities for storage of employees clothing or other personal belongings.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris.

Observed buildup and debris on and under shelving, under kitchen equipment, under cold holding units and large commercial kitchen equipment.

Violation: Surface Not Clean

• Nonfood Contact Surfaces - Cleaning Frequency

- Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the buildup of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests. Instructed PIC to create a cleaning schedule and to clean the surface.

Observed nonfood contact surface with the buildup of soil residues. The surface was located inside walk in freezer The surface was made out of stainless steel The condition of the surface was substantial ice debris buildup inside walk in freezer floor and shelving.

WECKS - 7301 PASEO DEL NORTE NE

Food Establishment Class C

Date: 07/22/2026 - #: PT0154794 - Inspection Result: Approved

Violation: Food Identification, Safe, Unadulterated and Honestly Presented

• Food Storage Containers Identified with Common Name of Food

- Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food. Instructed PIC to label all containers. Observed employee label spray bottles of cooking oil and container of spinach during inspection. Violation corrected on site.

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification. Working Container of Food: cooking oil and spinach. Location: cooking oil in spray bottle underneath prep table, spinach in plastic container in prep top cooler.

Violation: Storage

• Storage or Display of Food in Contact with Water or Ice

- Storage of unpackaged food on undrained ice creates potential for increasing the microbial load of a food because, as the ice melts, pathogens from one food may be carried by water to other foods. The potential for contamination is reduced by continuous draining of melting ice. Except for whole raw fruits and vegetables; cut, raw vegetables such as celery or carrot sticks or cut potatoes; and tofu or raw poultry or raw fish received immersed in ice during shipping; unpackaged food must not be stored in direct contact with undrained ice. Observed employee place food items in a container with a lid during inspection. Violation corrected on site.

Observed unpackaged food improperly stored in contact with undrained ice. The packaging of the food was not sufficient due to not being available to prevent the entry of water or the dripping of condensation on to the foods surface. Location: in chest freezer. Food Item: frozen breaded chicken fried steak portions. Food Packaging: no packaging observed.

Food Processor Class C

Date: 07/23/2026 - #: RT-PRC-002548-2026 - Inspection Result: Approved

Complaint

This inspection was the result of a complaint received by the Department and was unsubstantiated.

Violation: Surface Condition

• Nonfood-Contact Surfaces, Smooth, Corrosion-Resistant, Non-Absorbent

- Nonfood-contact surfaces of equipment routinely exposed to splash or food debris are required to be constructed of nonabsorbent materials to facilitate cleaning. Equipment that is easily cleaned minimizes the presence of pathogenic organisms, moisture, and debris and deters the attraction of rodents and insects. Instructed PIC to replace the surface with a material that is nonabsorbent.

Observed nonfood contact surface that was absorbent. The surface was located Under front display case. The surface was made out of 2 x 6 wood. The condition of the surface was absorbent and not easily cleanable.

Violation: Equipment, Food Contact Surfaces, and Utensils Clean

• Equipment, Food-Contact Surfaces and Utensils - Clean to Sight and Touch

- The effectiveness of chemical sanitizers can be directly affected various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions, and shall be used within designated parameters. Instructed PIC that for quaternary ammonium compound solution at a concentration range of allowed by the manufacturer must also be at a minimum temperature of 75F with a contact time of 30 seconds.

Observed quaternary ammonium compound solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization.

Location: Front service counter.

Concentration: tested at 100 ppm.

Temperature: of 78 degrees.

Violation: Storage

• Equipment and Utensils, Air-Drying Required

- Items must be allowed to drain and to air-dry before being stacked or stored. Stacking wet items such as pans prevents them from drying and may allow an environment where microorganisms can begin to grow. Instructed PIC to allow items to be air-dried, and to retrain staff on preventing wet stacking.

Observed utensils were not air dried and were wet stacked. Location: Storage shelving.

Utensil Type: Donut display pans.

Manner: display pans were stored wet stacked.

Violation: Physical Facilities, Cleaning

• Cleaning, Frequency and Restrictions

- Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared. Instructed person in charge to remove buildup and debris on left-hand side of the Gondola racks next to receiving, three drains, under sales floor display case, under table and cabinets front counter. and to clean and sanitize areas noted.

observed buildup and debris on the left-hand side of the Gondola racks next to receiving, three drains, under sales floor display case, under table and cabinets front counter.

Violation: Ventilation and Hood Systems

• Heating, Ventilation, Air Conditioning System Vents

- Heating, ventilating, and air conditioning systems shall be designed, installed, and maintained so that make-up air intake and exhaust vents do not cause contamination of food, contact surfaces, equipment, or utensils.

Observed heating and air conditioning system vents not properly designed and located to be easily cleanable. Location: Donut making areas.

Manner: Vents with substantial buildup.

Violation: Physical Facilities

• Outer Openings, Protected

- The presence of insects and rodents is minimized by protecting outer openings to the food establishment. Outer openings of a food establishment shall be protected against the entry of insects and rodents by having solid, self-closing, tight-fitting doors. Instructed PIC to repair or replace the doors so that they are solid, self-closing, and tight-fitting. Light should not be seen through the door when closed. Self-closing doors are not required when they are exit doors that are solid and tight-fitting, designated as an emergency exit, or have limited use.

Observed doors to the outside that are not tight fitting, light can be seen at the edges. Front entry double doors.
